This agreement is subject to applicable USDA NRCS statutory provisions and Financial Assistance Regulations. In accepting this award or amendment and any payments made pursuant thereto, the undersigned represents that he or she is duly authorized to act on behalf of the awardee organization, agrees that the award is subject to the applicable provisions of this agreement (and all attachments), and agrees that acceptance of any payments constitutes an agreement by the payee that the amounts, if any, found by NRCS to have been overpaid, will be refunded or credited in full to NRCS.

#### NONDISCRIMINATION STATEMENT

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, SW., Washington, DC 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

### PRIVACY ACT STATEMENT

The above statements are made in accordance with the Privacy Act of 1974 (5 U.S.C. Section 522a).

CAROL L. SALAIZ Manager ECOM USA LLC Carl & Salon

5.8.2023

### Statement of Work

### Purpose

The purpose of this agreement, between the U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS) and ECOM USA, LLC (Recipient), is to build markets for climate-smart commodities and invest in America's climate-smart producers to strengthen U.S. rural and agricultural communities.

### Objectives

The objectives of this project are to support the production and marketing of climate-smart commodities by providing voluntary incentives to producers and landowners, including early adopters, to implement climate-smart agricultural production practices, activities, and systems on working lands; measure/quantify, monitor and verify the carbon and greenhouse gas (GHG) benefits associated with those practices; and develop markets and promote the resulting climate-smart commodities.

## **Budget Narrative**

The official budget summarized below and described in the attached Budget Narrative will be considered the total budget as last approved by the Federal awarding agency for this award.

Amounts included in this budget narrative are estimates. Reimbursement or advance liquidations will be based on actual expenditures, not to exceed the amount obligated.

TOTAL BUDGET \$31,877,199

TOTAL FEDERAL FUNDS \$29,999,999
PERSONNEL \$0
FRINGE BENEFITS \$0
TRAVEL \$0
EQUIPMENT \$0
SUPPLIES \$0
CONTRACTUAL \$3,034,022
CONSTRUCTION \$0
OTHER \$26,965,977 (includes PRODUCER INCENTIVES \$24,144,207)
TOTAL DIRECT COSTS \$29,999,999
INDIRECT COSTS \$0

TOTAL NON-FEDERAL FUNDS \$1,877,200
PERSONNEL \$1,188,636
FRINGE BENEFITS \$118,864
TRAVEL \$190,585
EQUIPMENT \$0
SUPPLIES \$33,762
CONTRACTUAL \$0
CONSTRUCTION \$0
OTHER \$345,353 (includes PRODUCER INCENTIVES \$0)
TOTAL DIRECT COSTS \$1,877,200
INDIRECT COSTS \$0

Recipient has elected to voluntarily waive indirect costs.

### Responsibilities of the Parties:

If inconsistencies arise between the language in this Statement of Work (SOW) and the General Terms and Conditions attached to the agreement, the language in this SOW takes precedence.

RECIPIENT RESPONSIBILITIES

Perform the work and produce the deliverables as outlined in this Statement of Work and attachments.

Ensure Paperwork Reduction Act (PRA) clearance is obtained prior to conducting data collection from producers or other project participants, including data collection performed by subrecipients.

Comply with the applicable version of the General Terms and Conditions.

Submit reports and payment requests to the ezFedGrants system as outlined in the applicable version of the General Terms and Conditions. Reporting frequency is as follows:

Performance Reports: Quarterly

SF425 Financial Reports: Quarterly

Detailed Progress Report: Quarterly

(The detailed progress report is in addition to the performance and financial reports referenced above and described in

the general terms and conditions)

### **Expected Accomplishments and Deliverables**

See attached Benchmarks Table and associated Project Narrative.

### Resources Required

See the Responsibilities of the Parties section for required resources, if applicable.

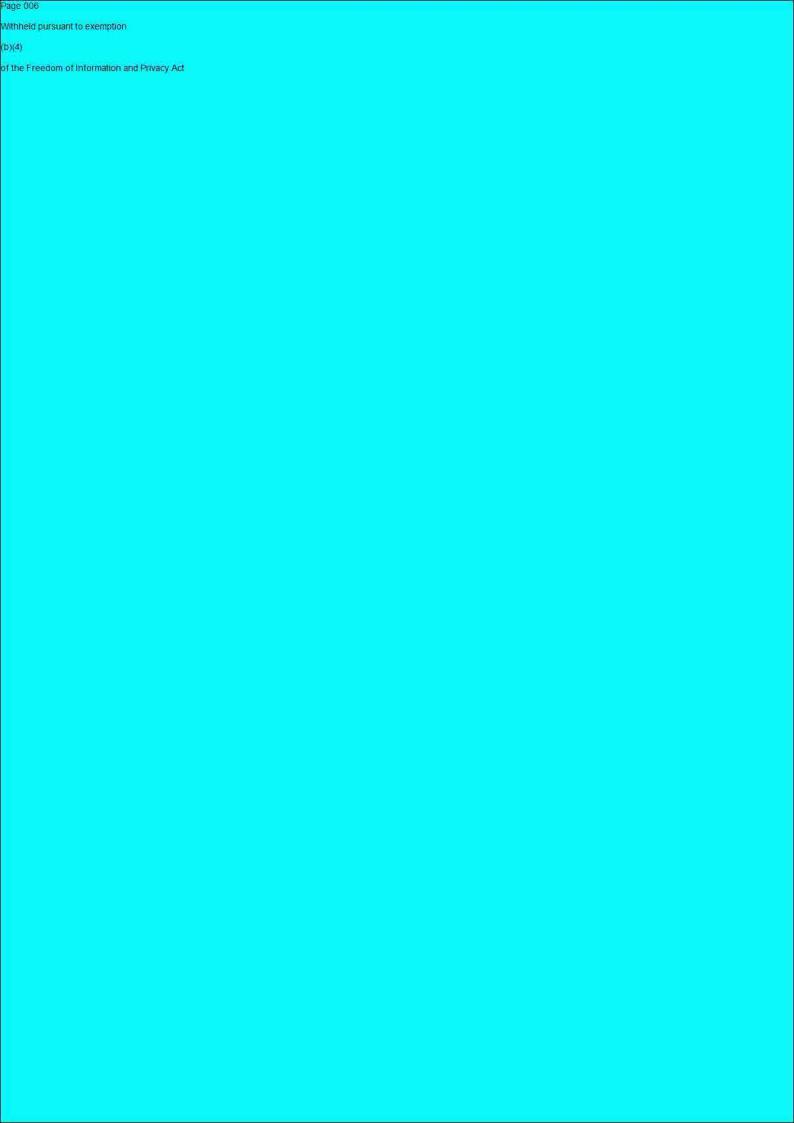

#### Milestones

See attached Benchmarks Table and associated Project Narrative.

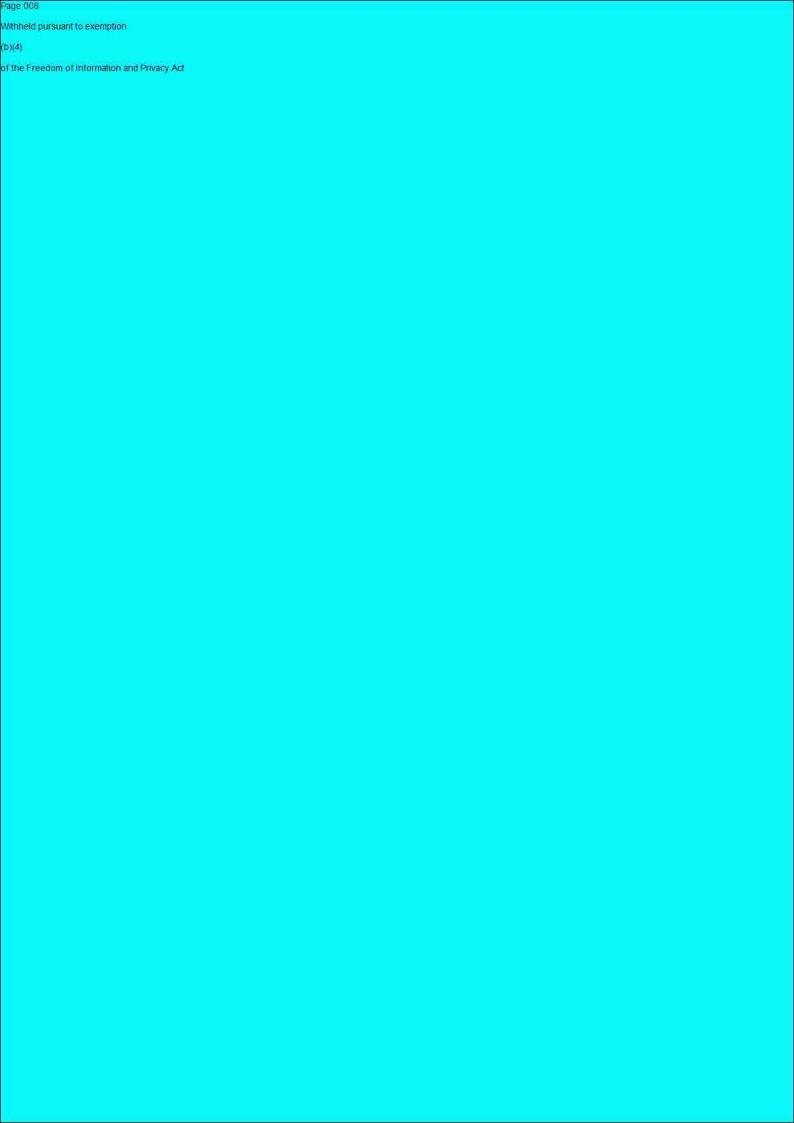

## **GENERAL TERMS AND CONDITIONS**

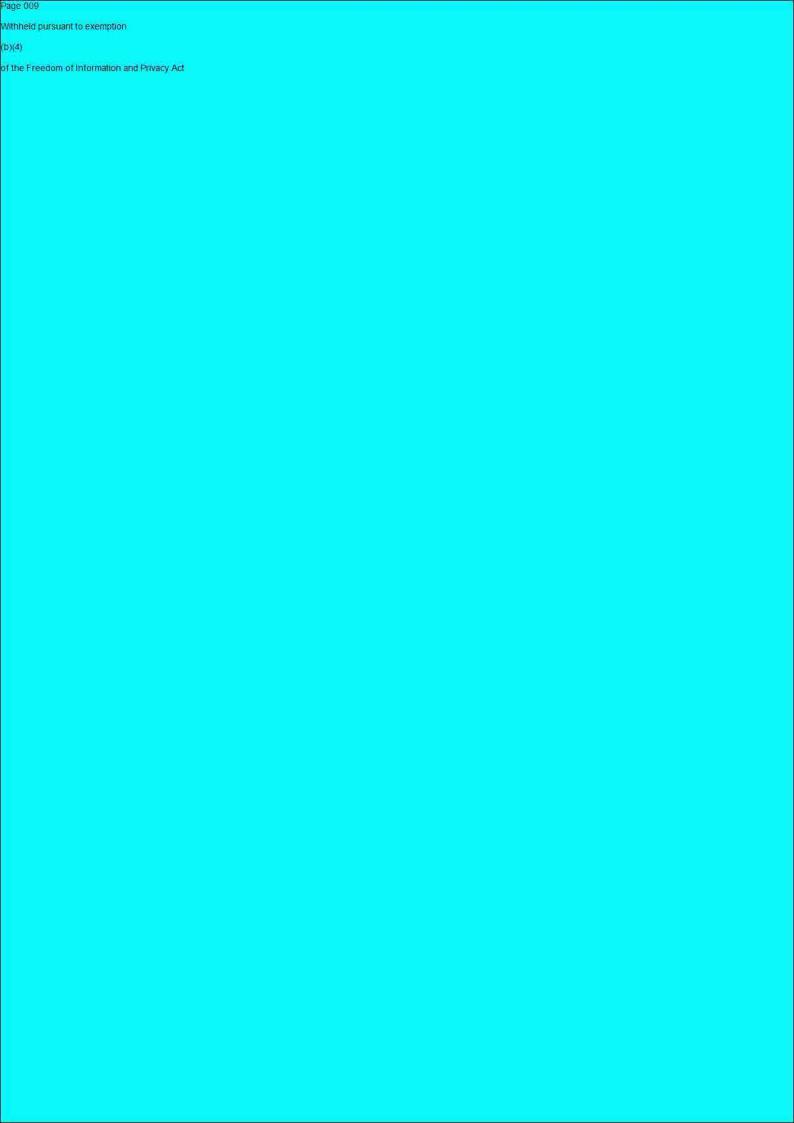

Please reference the below link(s) for the General Terms and Conditions pertaining to this award: https://www.fpacbc.usda.gov/about/grants-and-agreements/award-terms-and-conditions/index.html

#### A. Contact Information

- Brady Raindl, Cotton, ECOM USA, 12312 Slide Road, Lubbock, TX 79424. O (806) 762-0365, F (806) 762-0951, C (806) 790-7188, <u>BRaindl@ecomtrading.com</u>
- Brett Edgy, Cotton, ECOM USA, O (912) 656-4126, brett.edgy@ecomtrading.com
- Courtney Hodges, Cotton, ECOM USA, O (970) 430 5830, courtney.hodges@ecomtrading.com

### B. List of Project Partners

- Earthworm Foundation (EF), a 501(c)3 & global non-profit organization that works with individuals from farm to boardroom to build supply chains that work for people & nature.
- Texas A&M AgriLife Research is the state's premier research & technology development agency in agriculture & has a wide-spread extension service center with highly-qualified extension staff across entire Texas addressing key issues for Texas' producers.

- University of Arkansas System Division of Agriculture Cooperative Extension Service (UADA-CES) is part of the University's Division of Agriculture. The Agricultural Experiment Station & UADA-CES conduct research & extension work.
- Quarterway Cotton Growers is a farmer-owned gin located in Plainview, Texas. Quarterway Cotton Growers is an early adopter of the Better Cotton Initiative (BCI) & one of the very few BCI certified cotton gins in the country.
- Control Union is a global organization supporting companies to achieve their sustainability
  goals. Through the regenagri initiative, Control Union supports farms to transition to
  regenerative farming practices that increase soil organic matter & reduce GHG emissions.
- **5 LOCCotton** is a sustainable cotton expert consultancy who supports companies in the textile value chain to develop & implement their sustainable cotton strategy & story.

# C. List of underserved/minority-focused project partners

ECOM USA: The project seeks to include 29 underserved farmers (of which 10 are women). With 18 of these growers ECOM USA has a direct relationship going back up to 10 years. As part of the commercial relationship that ECOM USA has with these farmers - the sale & purchase of cotton — our staff has frequent interactions including regular farm visits for marketing updates, price & contract discussions, & exchanges on yield & farming information.

Quarterway Cotton Growers: ECOM USA has connections to additional underserved producers through Quarterway Cotton Growers, a cotton gin, whose group of growers consists of approximately 20% of minority farmers. The gin organizes regular meetings with their growers to connect with ECOM USA representatives. Through existing relationships, such as with Quarterway Cotton Growers we will expand outreach each subsequent year of the program to additional (minimum) 11 underserved/minority producers.

Earthworm Foundation (EF): EF, a 501(c)3, will lead outreach & engagement with the underserved/minority farmer partners participating in this project. Dr Kimberlee Chambers, will partner with ECOM USA, & Texas A&M AgriLife Research & Extension to ensure that a gender, social, & equity lens will be applied to the overall project, specifically for communications, & development of climate smart educational materials, outreach/educational activities, & engagement on farm for data collection & practices implementation. EF is experienced at engaging underserved & marginalized producers. EF believes that continuous improvement in their practices is critical. To serve this priority they have an extensive network of non-profit collaborators & a dedicated human rights team focused on staying on top of best practices ensuring that to the best extent possible these lessons are integrated into their work.

# D. Compelling need for the project

Producers across the country are experiencing climate impacts on their operations through shifting weather patterns & increasingly frequent & severe storms. In addition, floods, drought & wildfire are leading to heavy soil erosion & degradation. Especially problematic for cotton growers has been the gradually shortening growing season which reduces the timeframe for crops to mature negatively impacting yields & leaving producers with less cotton to sell & ultimately less income. At the same time growers face pressure from the market as cotton buyers, textile companies & consumers increasingly demand sustainably produced clothing with a zero or low carbon footprint. For example, globally 187 textile & apparel companies (14% are US American) have signed up to the Science Based Target Initiative & therewith have committed to certain CO2 reduction targets for their businesses. The cotton used in their production makes up the majority of their Scope 3 emissions & therefore, cotton with a low CO2 footprint is preferable. But also from a brand & retailer perspective the situation is not that clear cut: In spite of various consumer studies pointing towards a positive willingness to

pay more for sustainable products, brands & retailers are fearful of over-pricing their goods & losing market share, as they are insecure about what the consumer is actually willing to pay for. Consequently, they find themselves in a conundrum of sustainability commitments versus sales targets. For producers to transition to climate smart practices is risky & costly; the incentives to switch to climate smart practices are not (yet) outweighing the risks due to the transitional stage of the textile market described above. Farmers are worried that their climatesmart investments will not be rewarded with adequate demand at the right price - a premium above conventional cotton. This is specifically critical in the case of organic cotton, as transition takes long & requires very high on-farm investments. During this transition, the market does not offer any premiums leaving the farmer with significantly higher production costs without any compensation for their efforts. Therefore, an incentive push is needed to justify the risk & costs coming with the change towards climate-smart farming to bridge the market & farm transition phase during which producers are the most economically vulnerable value chain player. Therefore, through project resources ECOM USA will offer growers an incentive payment scheme for moving towards climate-smart practices. This premium scheme will be flanked with trainings & on-farm support to help develop climate-smart farming practices specific to farmers' cropping systems & the individual challenges they encounter. The project's approach is a holistic one in that both supply & demand side are addressed in order to move the entire supply chain towards sustainable, climate-smart cotton. Therefore, ECOM together with project & value chain partners, will work on the advancement of the market for climate-smart cotton through project promotion with brands & retailers, & providing outreach & education up to consumer level. An essential part of this forms the quantification of resulting GHG benefits & the tracking of these through the entire supply chain. ECOM USA has partnered with expert companies to ensure verified GHG measurements & to offer the market a cutting-edge traceability system for product transparency from farm to shelf.

## E. Approach to minimize transaction costs associated with project activities

As outlined in more detail in the Budget Narrative ECOM USA will absorb ECOM USA's project management costs, other staff costs & staff travel costs as in-kind contributions. Other ECOM USA match funding will help to reduce transaction costs comprising the subscription costs of the alternative methodology for the quantification of GHG benefits (the Cool Farm Tool). Similarly, EF, Texas A&M, University of Arkansas, University of Arkansas & 5LOCCotton are providing a part of their services or licenses at no cost. For cost efficient project management EF & ECOM USA will jointly manage the project only during the first 3 years of the project with ECOM USA taking over fully by year 4. The building of ECOM USA's internal capacity will enable them to run the remaining 2 years of the project as well as roll-out & run similar activities across their entire US cotton supply chain without the need for external support in the future. As data requirements cut across all project components, the related costs are being kept low by applying a rigorous partner coordination approach. Data will be accumulated in one comprehensive database accessible to all project partners so that each data point is only collected once. Finally, through ECOM USA's market development activities within this project we expect a gradually reducing need for incentive payments to farmers as the market picks up these premiums.

F. Approach to reduce producer barriers to implementing CSAF practices for the purpose of marketing climate-smart commodities

Producers may encounter a diversity of potential barriers – whether perceived or actual – when engaging in climate smart agricultural practices. Below we outline this program's approach to addressing potential barriers.

- Financial barrier: The financial barriers have been discussed above. The project will
  provide a financial incentive to producers by rewarding acreages converted to climate smart
  cotton with premiums (for more info please see "D. Plan to provide financial assistance for
  producers/land owners").
- Skill/knowledge barrier: The technical assistance component of this project will address
  barriers stemming from lack in technical & agronomic knowledge around climate smart
  agriculture. Specialists with Texas A&M University & the University of Arkansas will
  support farmers through workshops, field visits & regular advice, and will also educate
  growers on the economic & cost-benefit perspective of climate-smart agriculture to equip
  them with insights on their projected business finances.
- Insecurity on market access: Similarly barriers relating to farmers' fears around finding a
  market for their regenerative cotton (at the right price) will be addressed by info sessions on
  market developments in the climate smart commodity space. ECOM USA will actively
  provide market access for the climate-smart cotton generated during this project with the
  view to establish long-term premium-cotton purchase agreements.
- Administrative barrier: Farmers are doing excellent work in the field & with their crops.
  But often administrative paperwork are tasks which many struggle with which has been an
  entry hurdle for various certification schemes. The project will support farmers on
  administrative processes required for signing up to certification programs & data entry
  needed for the GHG benefit quantification & traceability system.
- Social barrier: Research on barriers to adopting regenerative agriculture regularly reference the social & peer pressure that farmers can experience when changing farm management practices, particularly when these practices diverge from what is commonly done in a region & for a crop. ECOM USA & project partners understand this pressure experienced by farmers & will work to help address it by meeting with farmers & community members, providing information on proposed practices, sharing market insights, & working throughout the supply chain to address questions.

### G. Geographic Focus

In Texas, the primary focus will be: the High Plains (geographical reference being Plainview) & the Lower Rio Grande Valley (geographical reference being Harlingen). Other areas cover the Texas Gulf Coast including the Coastal Bend & Upper Coast. The Texas Congressional Districts include: TX-010, TX-013, TX-015, TX-019, TX-023, TX-027 & TX-034. In central Arkansas, the project will focus on producers near Cotton Plant, AR including Congressional Districts AR-001, AR-002 & AR-004.

These geographic areas were selected as project locations because they represent critical sourcing areas within ECOM USA's supply chain, & have suffered reduced yields due to potential impacts from climate change — worsening water scarcity, degenerated soils, & a historic drought. Further, because of the long-standing & strong relationship with the producers in these areas, & their on-going commitment around climate-smart practices (early adopters) ECOM USA is confident that the envisaged project can be successfully implemented.

H. Project management capacity of partners (description of existing relationship / prior experience working with producers, promoting CS activities & marketing CS commodities).

ECOM USA has long-standing relationships with the targeted producers dating back over 20 years. The farmers in this proposed program & ECOM USA have a commercial relationship around the sale & purchase of cotton, which also comprises frequent interactions including 3-4 annual visits of ECOM USA staff to the farms & gins for marketing updates, price & contract discussions, & exchanges of yield & farming information. The ECOM USA team has a trust-based relation with their supplying producers; beyond the interaction in the framework of industry-grower meetings, ad-hoc phone conversations to discuss market strategy & production form a routine part of the ECOM-grower partnership.

ECOM USA has assigned Courtney Hodges as the overall Project Manager. She has over 10 years of experience with agricultural value chains and in 2018 completed the MS-MBA in Food and Agribusiness Program hosted by Purdue University and Indiana University. She also has successfully managed to completion a variety of local and global projects within the ECOM Group's portfolio.

The ECOM Group's Cotton Division overall has been committed to the increased availability, traceability, and marketing of climate smart cotton. The Project Commercial Lead, Darren Long, provides expertise in support of the marketing of climate smart cotton, is currently the Deputy CEO of ECOM USA, brings 15 years' experience of trading and cotton merchandising, and guides the team by leading the definitions for the project's strategic direction, oversight of the project's performance and long-term success. Charles Jannet, the project's Group Commercial Lead, has directly overseen the advancement of these initiatives and brings over 20 years of commercial experience to the team.

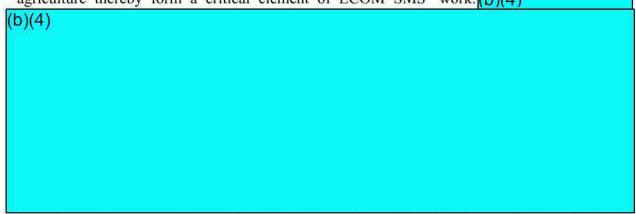

ECOM Cotton Brazil and Europe have been collaborating with a company called (b)(4)
as a means of traceability to

enable tracking of the cotton across the full value chain. This transparency initiative is running since 2019 & covers each step in the cotton life cycle, from raw materials to finishing. The project links cotton from Brazil to the final garment produced & sold by an Italian fashion house.

At a group level, ECOM is committed to a low-carbon future: In June 2021 ECOM signed up to the Science Based Target Initiative with the goal to become net zero by 2050. ECOM has just completed a CO2 baseline assessment of its current operations to determine the base level for the Group's GHG reduction strategy. Further, ECOM is a member of the Cool Farm Tool Alliance, a not-for-profit member organization that owns & operates the Cool Farm Tool, used to measure on-farm environmental sustainability. The ECOM Group has a division dedicated to Carbon & Climate Change, & is active in various forums at management level. ECOM's Head of Carbon Strategy was recently nominated as a Candidate for the Better Cotton Council Elections 2022 in the Suppliers & Manufacturers category. Yazmin Leon, from the ECOM

Group's Climate Team, is a sustainability quantification professional and is serving as the project's GHG & Carbon Accounting Lead.

In addition to cotton, within its cocoa & coffee value chains, ECOM has gained vast experience in the management of sustainability projects through its Sustainable Management Services (SMS) division, which extends support to smallholder farmers through a large network of agronomists (www.ecomsms.com/). The promotion & extension services around climate smart agriculture thereby form a critical element of ECOM SMS' work. (b)(4)

In their capacity as extension specialists, Texas A&M and UADA-CES have been advising & working with farmers for many years with a focus on climate smart practices and monitoring the changes in soil health due to practice implementation.

EF will support ECOM USA with project management – drawing on extensive global project management experience with agricultural value chain enhancement initiatives. ECOM & EF have successfully partnered previously to bring about systematic changes in sustainable & regenerative supply chains. Currently ECOM & EF are implementing a cocoa sourcing landscapes project in Peru aiming to build sustainably-managed landscapes contributing to improved competitiveness & climate-resilience of production systems.

Leading EF's contributions to this program, Dr. Chambers holds a Ph.D. from University of California-Davis, & has conducted applied agricultural projects in the US, Canada, & Mexico. In this capacity she has worked with small to large-scale producers, collaborated with academics, non-profits, government agencies, & corporations, & published on topics such as gender & agrobiodiversity conservation.

ii. Plan to pilot climate-smart agriculture and/or forestry practices on a large scale, including:

A. A description of CSAF practices to be deployed,

Most impactful climate smart practices to be deployed during this project are: Crop rotation in combination with reduced tillage. This approach has a strong potential to increase soil organic content due to greater biomass inputs if rotated with crops such as corn, grain sorghum & wheat. Further, reduced tillage practices are expected to decrease GHG emissions. Due to water limitations & environmental conditions affecting nitrogen mineralization/immobilization, crop rotations have been reported to be a better economic option compared to cover crops. Cover crop & reduced tillage: Through the addition of cover crops soil organic content can be enhanced while at the same time soil health is being improved. Reduced net GHG losses will be achieved with the added biomass from cover crop & reduced tillage. Cover crops proven successful in the High Plains of TX include wheat & rye. Nutrient management: Optimized nutrient management represents an important component within a climate smart farming plan. Improvements in the timing & method of application will lead to

an increase in use efficiency, thus reducing nitrous oxide losses. GHG emissions can potentially be reduced by 25% with optimized application timing & method.

The below provides a full list of climate-smart practices to be deployed and their respective NRCS-Code. All practices within this project are NRCS approved.

- Nutrient Management (NRCS Code 590) (NB: Nutrient management plans will be developed by certified nutrient management plan writers.)
- Cover Crop (NRCS Code 340)
- Conservation Crop Rotation (NRCS Code 328)
- Residue and Tillage Management, No Till (NRCS Code 329)
- Residue and Tillage Management, Reduced Tillage (NRCS Code 345)
- Irrigation Water Management (NRCS Code 449)\*
- Salinity and Sodic Soil Management (NRCS Code 610)\*
- Soil Carbon Amendment (NRCS Code 808)
- Pest Management Conservation System (NRCS Code 595)
- \* These practices will be implemented in combination with other climate-smart practices.

### B. Plan to recruit producers & land owners, incl. estimated scale of project (# of land owners)

As mentioned above ECOM USA through its function as a cotton merchant has a longstanding, existing relationship with many of the project target farmers. Therefore, recruitment of growers for participation in the envisaged project will start with ECOM USA team's standard outreach & communication. The ECOM USA team will introduce the project to farmers during a farm visit or telephone conversation, outlining planned activities & timelines, implications for the grower & financial benefits. (During the preparation phase of this proposal, the ECOM USA team has already started gauging interest from farmers & informing them about the potential for this project, pending outcome of the proposal review.) Further, meetings with larger grower groups will be held as soon as ECOM USA receives the go-ahead from USDA. In addition to the bilateral outreach to growers, ECOM USA will also utilize these meetings as a platform to introduce & sign up farmers to the project. In terms of targeted number of producers & acreages, the "Project Snapshot Table" on page 1 provides a comprehensive overview. In year 1, the project will start with 50 growers & 45,000 acres of cotton fields respectively. During the subsequent years additional farmers / acreages will be added gradually resulting in a projected final number of 90 growers & 95,000 acres in year 5 of the project. Thereby it is the target to have 90 producers on-boarded & actively involved in the project already by year 3. During the remaining 2 project years it is assumed that the 90 project farmers will further rollout climate-smart practices across larger areas of their land, eventually reaching 95,000 acres.

C. Plan to provide technical assistance, outreach, & training, including who will be conducting these activities, qualifications & projected timeline,

# Technical assistance for project farmers in Texas

Texas A&M AgriLife Research & Extension will collaborate with ECOM USA to assist farmers, develop climate smart educational materials (6 sets of material), conduct outreach/educational activities, & collect soil & agronomic data across multiple cotton growing regions of Texas. Thereby the Agrilife team will establish on-farm climate smart agriculture demonstrations in the Texas High Plains & South Texas regions. Demonstrations will include but are not limited to practices such as reduced tillage, cover crops, crop rotations, & improved nutrient management strategies. The latter will be developed by certified nutrient management plan writers and together with the local zone NRCS office with whom Texas A&M is closely

collaborating on the correct implementation of nutrient management practices. The agronomic support will be flanked by a cost-benefit analysis (CBA) to evaluate the farm-level net benefit a producer will realize by implementing climate smart practices compared to conventional production. For GHG assessments soil & agronomic data from demonstration sites & cotton fields across Texas will be collected to assess sustainability of systems by region. Soil parameters to be determined will include among others soil organic carbon. GHG (carbon dioxide, nitrous oxide, & methane) & ammonia emissions will be determined in real time at demonstration sites. This data will be used to evaluate the potential of climate smart practices to reduce GHG losses, increase C capture & storage, & improve N use efficiency.

Therefore the Texas A&M Agrilife Research and Extension Teams consisting of several experts, will conduct 12 farm site visits and producer meetings and field days per year. During these visits the teams will run educational events including 10 training events focused on climate-smart practices. Further a total of 7,500 soil samples will be collected and analyzed (1,500 samples per year during Project Years 1 to 5).

## Texas A&M Team Qualifications:

Dr. Lewis holds a Ph.D. and M.S. in Soil Science, both degrees were obtained at Texas A&M University. She is currently jointly appointed as Associate Professor in Soil Chemistry & Fertility by Texas A&M AgriLife Research & Texas Tech University.

Dr. Kimura holds a holds a Ph.D. in Agronomy from Washington State University, WA, and works as Associate Professor, Extension Agronomist, and State Extension Peanut Specialist at the Dept. of Soil and Crop Sciences Texas A&M AgriLife Extension Service, Vernon, TX. Her research and extension work has been honored with various awards; the latest one was the Dr. J. Tom Cothren Outstanding Young Cotton Physiologist Award received at the Beltwide Cotton Conference in January 2022. Her extension focus includes cultivar testing, nutrient management, soil fertility, cover crops, cropping systems, alternative crops, efficient irrigation. Within her role as Extension Agronomist she provides sustainable and economically sound agronomic practices to producers in the Rolling Plains of Texas through a collaborated effort with regional and state Extension Specialists and Research Scientists within Texas A&M system, as well as external collaborations across the states and nations.

Dr. McGinty holds a Ph.D. in Agronomy from Texas A&M University, & works as Assistant Professor & Extension Agronomist (specialized in cotton) in the Department of Soil & Crop Sciences, Texas A&M AgriLife Extension.

Will Keeling is an Extension Program Specialist I – Risk Management with the District 2 Texas A&M AgriLife Extension Service based in Lubbock, TX. He earned his M.S. & B.S. degrees in Agricultural & Applied Economics from Texas Tech University.

# Technical assistance for project farmers in Arkansas

The University of Arkansas System Division of Agriculture Cooperative Extension service (UADA-CES) will partner with ECOM USA & other partners on this proposal to help cotton farmers benefit from implementing climate smart agriculture via education & on-farm demonstration. UADA-CES will use its Discovery Farm Program (ARDF) to catalyze the adoption of climate smart practices. UADA-CES will extend the existing Discovery Farm infrastructure to address both agriculture's impact on climate change & demonstrating soil & conservation practices that increase resilience to climate change. The ADRF is an effective stakeholder-driven conservation demonstration program, where extensive, state-of-the-art

water quality monitoring systems are installed on real, working farms to document environmental impact & the potential of NRCS-approved conservation practices' off-farm impacts. The overall goal of the program is to document sustainable & viable farming systems that remain cost-effective in an environmentally sound manner. **UADA-CES** will monitor how conservation practices affect water quality, water use & soil health, to assess how climate smart agriculture for cotton can sequester carbon on these farms. These farms will be used to measure carbon sequestration rates by comparing farmer standard vs climate smart agriculture side by side. The data will be used to develop an educational program & Climate Smart Guide for Cotton Production, fact sheets, digital media & other educational products. Two existing Discovery Farms are located on private, working cotton farms in Desha and Phillips County and UADA-CES has established a third in Northeastern Arkansas that is funded by means other than this grant so that a Cotton Climate Smart Discovery Farm is easily accessible to all cotton farmers in Eastern Arkansas for field days and tours. UADA-CES will recruit a USDA-defined historically-underserved cotton farmer. UADA-CES will partner with the Arkansas Soil Health Alliance & the Arkansas Association of conservation districts to educate & promote climate smart agriculture & demonstrate how improving soil health can increase carbon sequestration rates.

For the provision of their technical assistance to the project farmers in Arkansas UADA-CES' Verification & Sustainability Coordinator will conduct several farm site visits during the year. Further, UADA-CES' agronomist and extension team will run 3 on-farm training events on climate-smart practices per year (total of 15) with an average of 10 participants in coordination with the Arkansas Soil Health Alliance, USDA-NRCS, Arkansas Association of Conservation Districts, and Arkansas Discovery Farms. These training events will be complemented with producer meetings & field days with an average of 25 participants, and a total of 2 (in Project Years 1 and 4) virtual field days with an anticipated participation of 150 farmers each. Each year one (total of 5) soil sampling event will be held for soil carbon and carbon sequestration sampling, as well as greenhouse gas monitoring sampling which will be sent to the University of Arkansas System Labs. (at least 400 soil samples per year (ie. at least 2,000 total across the entire project) will be collected and analyzed. 288 Carbon Sequestration samples will also be analyzed.). To accompany the above described events the UADA-CES team will develop 4 sets of educational material per year (total of 20) including material for virtual field days, annual reports, fact sheets / booklets and multiple slide sets.

#### University of Arkansas Team Qualifications:

Dr. Bill Robertson holds an M.Ag. & a Ph.D. in Agronomy from Texas A&M University & has served as the Cotton Extension Agronomist with the UADA-CES for 17 years. He was recently recognized at the National Cotton & Rice Conservation Systems Conference as the 2019 Cotton Researcher of the Year. (NB: As Dr. Robertson will be retiring soon, a new dedicated Cotton Agronomist will be hired for this project.)

Dr. Mike Daniels has served for the past sixteen years as an Environmental Management Specialist for UADA-CES. His focus areas are water-related issues, soil & water conservation, water quality & nutrient management. With regards to nutrient management Dr. Daniels has developed together with the State of Arkansas and NRCS the training program for certified plan writers, and is closely familiar with the processes around correct application of this practice. He holds a Ph. D. in Soil Sciences from Penn State University & currently serves as Co-Director of the Arkansas Discovery Farm Program & Co-Chair of the Division of Agric. Environmental Task Force.

D. Plan to provide financial assistance for producers/land owners to implement CS practices.

The financial assistance payments to farmers is one of the key components of this project. ECOM USA will utilize part of the grant funding to provide per-acre and per-bale premiums to farmers in order to incentivize them to adopt climate-smart practices. Incentive payments are needed as farmers face various financial hurdles during the transition to other farming practices, such as investment costs related to the transition, lower yields or quality implications. Acknowledging the diversity across farms & producers, we will be offering growers a 3-tier impact payment system to enable flexibility & maximum adoption of climate-smart practices. This impact payment system is guided by 3 certification schemes: Better Cotton Initiative, regenagri© & Transitional Organic Cotton. ECOM USA will direct grant money for regenagri© certified and/or transitional Organic Cotton on a per-acre basis to promote & incentivize the related climate-smart practices each year as well as to reward early-adopters who will serve as mentors for others in the program. Per-bale incentive payments will be made only after certification by Control Union, BCI or Texas Department of Agriculture is verified. Additionally, we will be tendering for and contracting an MRV service provider (see section iii. A for further details on MRV Service Provider) with the capability to apply a remote sensing technology platform to continuously track & monitor implementation of climate-smart practices. At the end of each growing season the MRV service provider (TBD) will provide a comprehensive report which will show detailed implementation progress on each field of the participating farms. Should a farmer fail to show successful implementation of BCI, regenagri© or Organic (transitional) practices the incentive payment will be rolled over to the next growing season to give producers a second window.

The financial incentive structure differs by certification scheme: With BCI comprising the most basic climate-smart practice requirements the incentive payments per bale are the lowest, while for Transitional Organic Cotton – the most stringent & most difficult to achieve certificate - the highest premiums will be paid out. The table below provides an overview of the incentive payments by certification program (with decreasing premiums in the last 2 years as we anticipate the market picking up these premiums):

| Certification Scheme        | Impact premium per acre (\$) | Impact premium per bale (\$) |
|-----------------------------|------------------------------|------------------------------|
| Better Cotton Initiative    |                              | 5                            |
| Regenagri©                  | 7 - 10.8                     | 25 – 40.2                    |
| Transitional Organic Cotton | 30 - 35                      | 100 – 126.65                 |

Our focus begins with **Regenerative Agriculture**. Our farmer partners, certified through **regenagri**©, will implement methods to restore soil & ecosystem health. Regenerative farming is not "one size fits all." Rather, farmers (with guidance from our allied grant partners) will utilize specific best practices that vary based on their specific region & needs. In line with the premium payout scheme explained above ECOM USA will direct grant funding to growers upon commitment, upon confirmation via regenagri© & the MRV Service Provider's report, & per production.

ECOM USA is currently working on a few small pilot projects with various mills, brands, & retailers who have indicated their willingness to make "impact" payments to growers for regenerative practices. Therefore, in order to continue the excitement of certified regenagri<sup>©</sup>, we believe that an impact payment is necessary to entice grower implementation. Through supply chain education including spinning mills & brands, we believe that these significant impact payments will continue filtering to the grower via the marketplace. Certified regenagri<sup>©</sup> cotton will eventually serve as the bridge between Organic (expensive, niche markets) cotton & conventional (more traditional, less expensive) cotton.

Not all growers can, or will be willing, to adopt regenagri<sup>©</sup>. Therefore, with the help of this project, ECOM USA will be offering another grant funding window for growers who are certified under the **Better Cotton Initiative (BCI)**. We believe that there is an opportunity via grant funding to pay a smaller, yet impactful premium to farmers for certified BCI production. The supply chain prefers USA grown cotton because of its quality & reliability. In addition, most are aware of BCI, with many already paying small premiums for BCI cotton. The aim of BCI incentive payments is to attract new BCI acreage, especially for those who are unable to meet the regenagri<sup>©</sup> practices, & increase supply of sustainably grown cotton. (NB: All growers – no matter if they are able to reach regenagri<sup>©</sup> requirements / certification or not – will have access to the regenagri<sup>©</sup> platform.)

As mentioned before, **Organic Cotton** is a highly niche market. However, it is a market where demand grossly exceeds supply. It is impossible (at least for now), to supply the world with only organic cotton due to the limitations surrounding it. One of those being climate, in that organic cotton is best suited to grow in semi-arid locations such as the High Plains of Texas, where weed pressure & insect pressure are less than in other growing regions. Unfortunately, this area is also highly drought prone, which can lead to small volumes produced on reduced acreage. In addition, farmers have significant barrier costs of converting conventional practices to organic. During the three-year transition phase, farmers incur all of the higher production costs (up to \$150/acre more) associated with organic practices yet they cannot sell transitional production for a premium. The supply chain offers massive premiums to organic cotton, while not being willing to pay anything additional for the transitional, even though it is held to the same standards of organic farming practices & is certified by the Texas Department of Agriculture as being in-transition. If we are to increase the supply of organic cotton, we must fund the transitional phase with premiums. ECOM USA will utilize a portion of grant funding to attract organic conversion on a per-acre & then per-bale rate once produced. Further, in our work with 5LOCCotton & brands we will encourage supply chain utilization of transitional cotton & educate why it deserves premiums over & above conventional production.

### Climate-Smart Impacts of Incentivized Certification Schemes

All the incentivized certifications promote practices that have a climate-smart impact on the relevant commodity; i.e., practices that reduce a commodity's GHG-footprint and/or enhance its carbon sequestration capacity.

The table below depicts all certification-related practices and actions, and describes their contribution to the project's GHG / CO2 targets. The table is set-up in a matrix-like manner as most practices / actions are not exclusive to just one certification scheme, but rather are applicable to several. For example, as shown at the top of the table the encouragement of farmers towards the "Use of biological & non-synthetic inputs" is covered by all 3 certification programs (BCI, regenagri© and USDA Organic). In contrast the complete ban of synthetic substances ("No use of synthetic substances") is only applicable to the most stringent certification label, namely USDA Organic. Under the column "Contribution to Project Scope" the table outlines the GHG impacts. In the case of the above-named practices, GHG-benefits are generated through GHG-reductions from decreased fertilizer usage and therewith lower fertilizer-related emissions (volatilization), as well as carbon sequestration stemming from improved micro-biological activity in the soil.

| Practice/Actions  | Description / Objective   | Contribution to Project Scope   | BCI | regenagri© | USDA<br>ORGANIC<br>(Transitional) |
|---|---|---|-----|------------|-----------------------------------|
| No use of synthetic substances  | -Prevents farms to the take up of carbon from external synthetic  | -GHG reduction (from fertilizer production  |     |            | V                                 |
| Use of biological & non synthetic inputs  | inputs (most are petroleum derivatives)  -Leads to natural production   | derivatives)  Leads to natural production systems where key organisms can thrive and restore ecological  and fertilizer use; ie. fertilizer-emissions (volatilization) from the field)  Carbon sequestration (from improved microbiological activity in the soil) | V   | V          | V                                 |
| Use Of Biological<br>Control & Natural<br>Enemies   | thrive and restore ecological cycles  |   | V   |            |                                   |
| Buffer areas to prevent<br>synthetic substances<br>contamination                            | -Helps farms avoid damaging   | Carbon sequestration (from additional buffer zone floral activity and adjacent ecosystem restoration)   |     |            | V                                 |
| Limit pesticide<br>applications to secure<br>technical conditions<br>(wind, rain, humidity) | organisms living in them which<br>are key to maintaining ecological<br>cycles & control pests, diseases<br>and weeds  | -Farm resilience to climate change (mainly<br>through crop protection from buffer zones,<br>and reduced exposure to pesticides /<br>insecticides of non-target species, and<br>therewith ultimately restoration of natural  | V   |            | N/A                               |
| Drift & runoff prevention   | -   | pest and disease control)   | ~   |            |                                   |
| IPD (Integrated Pest,<br>Disease and & Weed<br>management plan)                             | -Reduces the need and<br>dependence on synthetic inputs<br>(herbicides, insecticides and<br>fungicides) which lead to healthier<br>and resilient production systems | -GHG reduction (through reduced use of syn. Pesticides) -Farm resilience to climate change  | V   |            | V                                 |

E. Plan to enroll underserved producers (incl. estimated # of underserved producers etc.)

As the Project Snapshot Table (page 1) indicates the project targets 10 women & 19 minority farmers. Most of these farmers are already part of ECOM USA's supply chain; ie., the project recruitment of this farmer group will be conducted in the same manner as outlined under ii.B. above. However, in order to account for specific needs of this farmer group an additional layer of enrolment activities will be covered by EF. EF will build off of ECOM USA's existing relationships for outreach to the underserved & small producers. Once initial introductions have been made EF will travel to meet with producers on their land in order to best understand their unique challenges, knowledge networks, peer producer groups, & potential barriers to enrolment. From these initial informal interviews EF will work with Texas A&M to develop tools for outreach, training, & engagement that are specific to these producers. EF will travel with Texas A&M during their initial field visits to evaluate program implementation & conduct in-person follow-up meetings with these producers to understand potential additional needs. Simultaneously EF will evaluate ECOM USA's existing capacity & systems, & support the development of tools & protocols to ensure their ability to lead & expand their work with underserved & small producers in subsequent years. As noted in section "C. List of underserved/minority-focused project partners", EF US staff will draw from their organizations' global experiences leading on the ground engagement with producers for understanding & implementing best practices throughout their work.

Estimated dollar amounts anticipated to go directly to underserved producers, in the form of technical & financial assistance:

|  | Year 1   | Year 2    | Year 3    | Year 4    | Year 5    |
|--|----------|-----------|-----------|-----------|-----------|
| # of minority / women farmers (accumulated)              | 18       | 23        | 29        | 29        | 29        |
| Accumulated Acres(estimate)                              | 12,221   | 15,276    | 16,804    | 17,644    | 18,256    |
| Accumulated Bales (estimate)                             | 19,890   | 24,863    | 27,349    | 28,716    | 30,152    |
| Financial assistance (premiums, incentive payments) (\$) | 931,320  | 1,164,168 | 1,280,577 | 1,333,099 | 1,384,788 |
| Technical assistance (Texas A&M) (\$)                    | \$84,052 | \$69,431  | \$78,719  | \$79,650  | \$80,608  |
| Technical assistance (EF) (\$)                           | \$44,000 | \$41,800  | \$41,800  |           |           |

# iii. A measurement/quantification, monitoring, reporting, & verification plan, including:

A. Approach to GHG benefit quantification (consistent with "Quantification Requirements")

For this project component ECOM USA will be tendering for and contracting a specialist MRV Service Provider.

This selected MRV Service Provider will operate an advanced MRV (Measurement, Reporting & Verification) platform & outcome modeling methodology, which is able to identify, quantify, monitor, verify & report, down to the field level, the carbon removal & reduction impact resulting from any regenerative practice changes. This will be scaled across the project's entire portfolio of enrolled acres. The selected MRV Service Provider should have capabilities around e.g., Computer Vision technology utilizing remote sensing, high resolution geographic image processing, AI & machine learning tools, combined with outcome modeling, with an underlying suitable model such as e.g. SALUS (System Approach to Land Use Sustainability) & own crop, soil & carbon modeling experts. The selected MRV Service Provider's model must enable the prediction of yield, GHG emissions, carbon sequestration,

nitrogen runoff, crop maturity, & other factors, considering parameters such as soil, management, weather & climate scenarios.

#### Alternative GHG Benefit Measurement – COMET

The selected MRV Service Provider will also run the GHG quantification measurements using USDA's COMET methodology and compare results with their own SALUS-based methodology.

### Alternative GHG Benefit Measurement – The Cool Farm Tool

As mentioned previously in this proposal, the ECOM Group is a member of the Cool Farm Tool Alliance & has a subscription to the Cool Farm Tool, which allows any ECOM entity to utilize the tool to assess farms' CO2 footprint. The Cool Farm Tool (CFT) is an online-based tool to quantify on-farm greenhouse gas emissions & soil carbon sequestration. The tool is applicable across all land-based crops & countries. In order to run a GHG footprint analysis several data points on crop, growing area, field treatment, land use etc. need to be inputted into the user-friendly online portal. When data input is completed, the result & a report are generated immediately.

ECOM USA will apply this tool in the framework of this project as an alternative methodology to measure the project GHG impacts. The results generated by the Cool Farm Tool will be compared with the results obtained via the MRV platform as well as with the outcomes of the analyses conducted by the universities. It is well known that the methodologies to quantify the carbon reductions/removals vary & hence we believe it would be beneficial to take this opportunity to compare the different results we obtain from the different tools.

The Cool Farm Tool has been tested & adopted by a range of multinational companies (e.g. Better Cotton Initiative, Control Union, Gold Standard) who are working with their suppliers to measure, manage, & reduce greenhouse gas emissions in the effort to mitigate global climate change.

# Underlying Methodology (Cool Farm Tool, https://coolfarmtool.org/)

The Cool Farm Tool's greenhouse gas emissions calculator is based on empirical research from a broad range of published data sets & IPCC methods. (NB: The IPCC is the Intergovernmental Panel on Climate Change, the UN body for assessing the science related to climate change.) Unlike many other agricultural greenhouse gas calculators, the CFT includes calculations of soil carbon sequestration, which is a key feature of agriculture that has both mitigation & adaptation benefits. The tool calculates emissions estimates mainly from several hundreds of global datasets, peer-reviewed studies and industry data.

B. Approach to monitoring of practice implementation (incl. # of farms & acres reached).

# Computer Vision & Remote Sensing

The selected MRV Service Provider will use cutting edge technology such as satellite imagery based remote sensing & AI driven computer vision to detect & verify on-the-ground management practices, including the adoption of regenerative practices. These practices are detected at the field level using 10m resolution satellite imagery. Detection is performed multiple times throughout the growing season. Field level assessment & verification of regenerative practices can then be scaled-up to analyze trends in agric. management systems across very large geographic areas. Additionally, the MRV Platform should be able to access & analyze large scale USDA datasets, such as the Crop Data Layer to analyze long term historical trends. The selected MRV approach should be highly scalable and should allow monitoring of the total amount of targeted farms and acres. (For info on the anticipated number

of farms & acres reached through project activities please see the Project Snapshot Table on Page 1.)

Additionally, Control Union will conduct audits to verify practice implementation.

C. Approach to reporting & tracking of greenhouse gas benefits.

As described in the previous section the selected MRV Service Provider will utilize technology such as e.g. a satellite-enabled remote sensing technology to monitor implementation & changes in farm practices. This happens in a continuous process as monitoring is enabled with every imagery reported through the satellites linked to the MRV platform. Satellite images are taken and transferred several times during the growing season allowing for an almost round-the-clock observation of fields. Accordingly, measurement of the greenhouse gas benefits resulting from the observed farm management practices happens in the same rhythm.

With regards to reporting, the MRV platform should have a user-friendly interface to enable individual growers to monitor their farms/fields. The interface should also allow stakeholders like ECOM USA to view an entire portfolio of farms and keep track of the total portfolio's or individual farm's progress in implementation, realized GHG benefits (total GHG benefits, or per commodity produced, per dollar expended, & the anticipated longevity of GHG benefits). The selected MRV Service Provider will work together with ECOM USA to develop the most suitable, customized reporting dashboard enabling optimal project reporting. As described previously in section ii. D. The selected Service Provider's remote-sensing monitoring & related reporting will be instrumental in the payout of per-acre incentive payments to producers.

| Anticipated GHG Benefits (estimates) (incl. e | missions reduced & carbon sequestered)   |
|---|--|
| Total project GHG benefit: 78,000-156,000MT   | GHG benefit / acre: 0.20 – 0.40MT/acre   |
| GHG benefit / cotton bale: 0.26 - 0.52MT/bale | GHG benefit / \$ spent: 0.002-0.004MT/\$ |

(NB: Longevity of GHG benefits depends on growers' annual commitment to climate-smart practices.)

D. Approach to verification of greenhouse gas benefits.

ECOM USA will select and contract an MRV service provider whose methodology utilized for the calculation of the project-generated greenhouse gas benefits is sufficiently verified and compliant with internationally recognized GHG standards such as GHG Protocol, SBTi and VCI (Value Change Initiative; <a href="https://valuechangeinitiative.com/">https://valuechangeinitiative.com/</a>). The methodology's compliance with these standards is crucial as ECOM USA reports their progress towards net-zero based on these protocols. Further the underlying model and methodology of the selected MRV Service Provider will be externally and independently validated by an IPCC-compliant validation body; such as Verra. Other ways to ensure the chosen methodology is sufficiently verified and validated include ground-truthing with long-term data sets as well as peer-reviewed studies in the academic literature.

#### Additional Verification of GHG Benefits

As an additional means of verification both university partners - Texas A&M & Arkansas University – will conduct measurements to determine GHG emissions in real time at demonstration sites using a Gasmet FTIR coupled with a Licor survey chamber. This data will be used to validate GHG measurements established via the MRV platform as well as the alternative quantification practices Cool Farm Tool & COMET.

E. Agreement to participate in the Partnerships Network

Project Leads Brady Raindl and Courtney Hodges commit to represent ECOM USA on the Partnerships Network.

iv. A plan to develop & expand markets for generated climate-smart commodities

A. Any partnerships designed to market resulting climate-smart commodities.

Through ECOM USA's relationship with brands & retailers, we are part of their sustainability journey. Clients have committed to (environmental & social) sustainability targets, some are traded on the Dow Jones "Sustainability Index", & are now in a position where they have to show & report on continuous efforts to reach their targets. These players are therefore looking to their supply chain partners to support them in the achievements of their goals. In our function as a cotton merchant, ECOM USA is in the most impactful position within the supply chain to link the brands' commitments to farmers who are actively pursuing climate smart practices, & thus will support brands' target progression. During this project ECOM USA will work with sustainable cotton expert consultancy 5LOCCotton to further intensify & target the cooperation with clients around the purchase & sale of sustainable (i.e., regenagri©, BCI etc.) cotton. 5LOCCotton's expertise & network will support forging the connections between farmers, & apparel & home furnishing companies. Further the engagements between ECOM USA, 5LOCCotton, farmers & brands will target the development of long-term strategies & agreements progressing the market for climate-smart cotton in a way which is economically sustainable for all value chain players – from farmer to consumer. On the brands' side ECOM

USA will leverage their existing relationships with (b)(4)

(b)(4)

B. A plan to track climate-smart commodities through the supply chain.

For this part of the project, ECOM USA will tender for and contract a Traceability Service Provider with a suitable traceability platform to map the full supply chain from cotton farmers to the final garment. This will allow the farmers & all other partners involved in the process to document, describe & prove through data, descriptions, & certifications their GHG emissions. The platform therewith enables a seamless tracking of GHG benefits through the entire value chain. To establish this traceability system each partner of the supply chain will receive a access to this platform to input & manage their own data & processes; e.g. the selected MRV Service Provider will receive platform access to input GHG data. In order for ECOM USA & the textile brands to input their data onto the platform & at the same time have a comprehensive view on the full supply chain a Premium Access will be established. Through a thorough analysis of business requirements of all partners the traceability platform will be customized to align with project & partners' needs. Among other features the system will reflect the full supply chain, a certification validity control, supply chain online publications or functions to share data upstream in the supply chain.

As mentioned previously, ECOM Cotton Brazil has already tested a traceability platform to track the full journey of cotton from Brazil down to its final destination, a fashion store in Italy. Apart from the pilot, ECOM has been working with traceability platforms to track cotton from multiple other origin countries, e.g. Greece, Zambia, Mozambique, Turkey & Uganda. We therefore expect a smooth implementation of the traceability solution in the US cotton context.

## C. Estimated economic benefits for participating producers including market returns

As outlined under "D. Plan to provide financial assistance for producers" the project aims to incentivize producers to transition their farms to climate smart practices through the payment of per-acre & per-bale premiums. The table below shows the expected (gross & net) economic benefits per acre during the project considering current & projected conventional cotton prices as well as the envisaged premium payments. As the below table indicates the producer gross market returns are expected to show a continuing downward trend from Year 2 on reaching its lowest in Year 5 (2027) with \$733 per acre. In that same year net market returns are expected to even become negative. The financial impacts for producers participating in the project & implementing climate smart practices is significant. The strongest impact will be realized in the "Transitional Organic" bracket. Producers who commit to transition to Organic Cotton will benefit from a premium of \$132 per acre, & therewith an up to 18% increase in their gross return (up to \$1,063 per acre). Growers starting & achieving certification within the regenagri© scheme will receive premiums of up to \$78.9 per acre, translating into a growth of their gross market returns by 8% to 11% (up to \$1,010 per acre). Finally, with BCI being a "lighter" climate-smart standard, BCI will generate the smallest economic benefits of \$8.8 per acre in premiums & an increase of gross market return of only 1% (up to \$96 per acre net return). As the overview table shows net market returns are tight. All certification schemes will lead to a significant relief of producers' net market returns, which should encourage the addition of climate smart practices.

|                              | Year 1        | Year 2        | Year 3       | Year 4       | Year 5        |

<sup>\*</sup> Including both, premium paid per acre for implementation of related practices & per bale premium.

ECOM USA's cotton supply chain comprises 1,000+ farmers; i.e., at least 10x the number of farmers in this project. ECOM USA intends to gradually roll-out project activities across this grower network enabled through the learnings, educational material (for farmers, brands,

D. Post-project potential (incl. ability to scale activities, likelihood of long-term viability beyond project period, & ability to inform future USDA actions to encourage CS commodities)

consumers) & enhanced internal capacity generated & catalyzed by this project. As the linkage point between growers & brands, ECOM USA will be able to promote project learnings well beyond project participants, & will be able to identify the most suitable scale-up strategy linked to value chain players' readiness & commitment. Because of the holistic approach, including supply & demand side, ECOM USA expects the project transitioning towards a purely market-driven activity. We believe that USDA's resources will catalyze long-term farmer & brand engagements in climate-smart cotton with a viability beyond the 5-year project period. At Group & local level, ECOM will remain a strong partner to USDA & welcomes the opportunity to support the agency by sharing information & learnings for the development of new programs. Guided by ECOM's highly skilled Sustainability Department (SMS) ECOM has the ability to effectively manage learnings, & thereby organize, use, & share collective knowledge within ECOM & with our partners.

Milestones for the Project Proposal "Climate Smart Cotton through a Sustainable & Innovative Supply Chain Approach", submitted under USDA's Call for Proposals "Partnerships for Climate-Smart Commodities". Project Applicant: ECOM USA LLC

## **Climate-Smart Practices and Limitations**

Climate-Smart practices under this grant shall be limited to the following practices:

| NRCS Practice Code | Practice Name                                |
|--------------------|--|
| 328                | Conservation Crop Rotation                   |
| 329                | Residue and Tillage Management, No-Till      |
| 336                | Soil Carbon Amendment                        |
| 340                | Cover Crop                                   |
| 345                | Residue and Tillage Management, Reduced Till |
| 449                | Irrigation Water Management*                 |
| 590                | Nutrient Management                          |
| 595                | Pest Management Conservation System          |
| 610                | Saline and Sodic Soil Management*            |

<sup>\*</sup> These practices will be implemented in combination with other climate-smart practices listed above without asterisks.

All practices applied under this grant will follow NRCS practice standards unless noted below:

## Overview of Reporting Requirements

Grant recipients are required to submit reports to document their performance under the Partnerships for Climate-Smart Commodity funding opportunity. These submissions will be required to use the Microsoft Excel workbook templates provided by USDA. The workbooks contain a series of worksheets that collect data in a standardized format to ensure data quality and allow for aggregation and summary of this information. The entire workbook must be submitted quarterly, with updates to all applicable worksheets. This guide is divided into three sections. The Overview of Reporting Requirements section summarizes the layout of the reporting workbook and presents the data elements included in each worksheet. It also describes additional documents that must be submitted to supplement the performance reports. The Data Definitions section provides descriptions and allowable response options for each data element. The guide also indicates whether each data element is required, applicable at times, or optional; as well as how frequently each data element must be updated. Finally, the Appendices contain practice and commodity lists that will be used for these reports. Reporting is necessary for USDA oversight of this effort. The data elements required for inclusion in the quarterly performance reports allow USDA to conduct selected audits to review whether producers are receiving federal funds from multiple sources for the same purpose; to determine whether GHG benefits from implementation of climate-smart agriculture and forestry (CSAF) practices are being estimated accurately; and for other purposes deemed appropriate by USDA.

The reporting worksheets collect information at four levels: project, partner, producer, and field. Descriptions of each level:

**Project level**: Information about activities and impacts at a whole project/aggregate level (i.e., reflecting all activities under the grant agreement). Some project-level reporting is further subdivided by commodity type or a combination of commodity and CSAF practice(s) (commodity x practice).

**Partner level:** Information about activities related to a single organization (recipient, subrecipient, contractor, or other partner) within a project.

**Producer level**: Information about individual producers who have one or more farms enrolled in a project. **Field level**: Information about individual fields enrolled in a project.

Certain data elements are required to be reported for each producer and field enrolled in a project. In order to minimize the burden associated with data collection and to enable USDA to match data to existing records, these producer- and field-specific records must use the producer's established FSA Farm, Tract and Field IDs, and report the State and County associated with the Farm ID. Associated data entered in conjunction with these data elements, such as Producer Name, must match the data contained in the customer's Business Partner record, and the Farm Operating Plan in Business File for that Farm ID. Disclosure of this information is protected under Section 1619 of the Food, Conservation, and Energy Act of 2008 (PL 110- 246), 7 U.S.C. 8791. Additionally, Departmental Regulation 4370-001 provides USDA's policies for collecting demographic data, including race, ethnicity and gender. Providing demographic information is voluntary and at the discretion of the customer. Demographic information is used by USDA for statistical purposes only and will not be used to determine an applicant's eligibility for programs or services for which they apply.

**Note:** For purposes of this guide, "farm" refers to the operation from which climate-smart commodities are produced and may represent farms, ranches, forests or other operations. Similarly, "field" refers to the individual land units at which climate-smart practices are being implemented to produce climate-smart commodities and may represent lots, farmsteads or other units, depending on the type of operation and commodity. The use of "Farm", "Tract" and "Field" align with the FSA definitions; for example, "A field is a part of a farm that is separated from the balance of the farm by a permanent boundary, such as; fences, permanent waterways, woodlands, croplines in cases where farming practices make it probable that this cropline is not subject to change, and other similar features."

Version 1.0 Page 2 of 87

The following tables list the data elements included in each reporting worksheet, along with a brief description of each item.

## **Project Summary**

These data will be collected about each project. Cumulative results are reported each quarter. Report last quarter's entry if there has been no change in this quarter.

Table 1. Project Summary elements

| Data element name          | Description  | Frequency |  |
|----------------------------|--|-----------|--|
| Commodity type             | Type of commodity(ies) incentivized by the project                                 | Quarterly |  |
| Commodity sales            | Indicates sales of the commodity(ies) related to the project occurred this quarter | Quarterly |  |
| Farms enrolled             | Indicates enrollment activities occurred this quarter                              | Quarterly |  |
| GHG calculation methods    | Methods used to calculate greenhouse gas (GHG) benefits                            | Quarterly |  |
| GHG cumulative calculation | Method used to calculate cumulative GHG benefits                                   | Quarterly |  |
| Cumulative GHG benefits    | Whole project estimate of total GHG (CO2e) emission reductions                     | Quarterly |  |
| Cumulative carbon stock    | Whole project estimate of total carbon sequestration                               | Quarterly |  |
| Cumulative CO2 benefit     | Whole project estimate of total CO2 emission reductions                            | Quarterly |  |
| Cumulative CH4 benefit     | Whole project estimate of total CH4 emission reductions                            | Quarterly |  |
| Cumulative N2O benefit     | Whole project estimate of total N2O emission reductions                            | Quarterly |  |
| Offsets produced           | Amount of carbon offsets produced by project                                       | Quarterly |  |
| Offsets sale               | Name of marketplace where carbon offsets were sold                                 | Quarterly |  |
| Offsets price              | Price of carbon in offset sales  | Quarterly |  |
| Insets produced            | Amount of carbon insets produced by project  | Quarterly |  |
| Cost of on-farm TA         | Cost of on-farm technical assistance (TA) provided to producers                    | Quarterly |  |
| MMRV cost                  | Cost of measurement, monitoring, reporting, and verification (MMRV) activities     | Quarterly |  |
| GHG monitoring method      | Methods used by project to monitor GHG benefits (up to 5)                          | Quarterly |  |
| GHG reporting method       | Methods used by project to report on GHG benefits (up to 5)                        | Quarterly |  |
| GHG verification method    | Methods used to verify GHG benefits (up to 5)                                      | Quarterly |  |
|                            |  |           |  |

Version 1.0 Page 3 of 87

#### Partner Activities

These data will be collected at the project level. Each row in this worksheet will represent one organization involved in the project, including the recipient and all contributing partners. A partner is any organization that is receiving project funds or providing matching contributions (funds or in-kind contributions) to the project. While the recipient must complete one row for their own organization, not all data elements apply to the recipient. These exceptions are noted in the detailed descriptions of the specific elements in the *Data Definitions* section of this guide. Data are reported cumulatively each quarter. Report last quarter's entry if there has been no change in this quarter.

Table 2. Partner Activities elements

| Data element name        | Description  | Frequency     |
|--------------------------|--|---------------|
| Partner ID               | Unique ID for each partner   | One-time      |
| Partner name             | Name of partner organization   | One-time      |
| Partner type             | Type of organization   | One-time      |
| Partner POC              | Partner point of contact name  | As applicable |
| Partner POC email        | Partner point of contact email   | As applicable |
| Partnership start date   | Start of partnership on project  | One-time      |
| Partnership end date     | End of partnership on project  | As applicable |
| New partnership          | Indicator for partner organizations that have no prior work with the recipient                   | As applicable |
| Partner total requested  | Total amount requested to date by partner from recipient   | Quarterly     |
| Total match contribution | Total amount of match contribution by partner to date  | Quarterly     |
| Total match incentives   | Total amount of match contribution by partner for incentives                                     | Quarterly     |
| Match type               | Top 3 types of match contribution by partner, other than incentives                              | Quarterly     |
| Match amount             | Value of match contributions by type   | Quarterly     |
| Training provided        | Top 3 types of training provided to the partner through project                                  | Quarterly     |
| Activity by partner      | Top 3 types of activities provided by this partner to producers or other partners                | Quarterly     |
| Activity cost            | Approximate cost per activity type provided by partner to producers or other partners            | Quarterly     |
| Products supplied        | Names of products supplied to producers as part of project activities or incentives              | Quarterly     |
| Product source           | Supplier or source of products supplied to producers as part of project activities or incentives | Quarterly     |

Version 1.0 Page 4 of 87

## Marketing Activities

These data will be collected at the project level. Each row in this worksheet will correspond to one commodity for which the project enrolls fields and one marketing channel used to sell that commodity by the project or producers enrolled in the project. Data are reported for the current quarter and are not cumulative. If no sales of the commodity were reported during a quarter, do not complete this worksheet for that quarter.

Table 3. Marketing Activities elements

| Data element name                       | Description   | Frequency |
|---|---|-----------|
| Commodity type                          | Type of commodity incentivized by the project         | Quarterly |
| Marketing channel type                  | Type of marketing channels used                       | Quarterly |
| Number of buyers                        | Number of buyers per marketing channel                | Quarterly |
| Names of buyers                         | Names of buyers in the marketing channel              | Quarterly |
| Marketing channel geography             | Geography of marketing channel                        | Quarterly |
| Value sold                              | Value of commodity sold by marketing channel          | Quarterly |
| Volume sold                             | Volume of commodity sold by marketing channel         | Quarterly |
| Price premium                           | Price premium of commodity by marketing channel       | Quarterly |
| Price premium to producer               | Percent of price premium that goes to the producer    | Quarterly |
| Product differentiation method          | Top 3 types of product differentiation methods used   | Quarterly |
| Marketing method                        | Top 3 types of marketing methods used                 | Quarterly |
| Marketing channel identification method | Top 3 ways marketing channel was identified           | Quarterly |
| Traceability method                     | Top 3 types of supply chain traceability methods used | Quarterly |
|   |   |           |

Version 1.0 Page 5 of 87

#### **Producer Enrollment**

These data will be collected at the producer level about each farm enrolled in the project. In this worksheet, each row will correspond to one farm that has at least one field enrolled in the project. Data are reported when a producer first enrolls one or more fields in the project. If a producer is enrolled in the project for multiple years, review the farm characteristics each time a new contract is signed and provide any necessary updates. The quarterly submission should contain information about each farm initially enrolled in the project during that quarter and for updates to farms that have re-enrolled during that quarter, as applicable. If no farms are enrolled during that quarter, do not complete this worksheet for that quarter.

Table 4. Producer Enrollment elements

| Data element name         | Description  | Frequency     |
|---------------------------|--|---------------|
| Farm ID                   | Unique Farm ID assigned by FSA   |               |
| State or territory        | State name (must match FSA farm enrollment data)                                 |               |
| County of residence       | County name (must match FSA farm enrollment data)                                |               |
| Producer data change      | Indicator that producer data was updated at re-enrollment                        | As applicable |
| Producer start date       | Contract start date  | Enrollment    |
| Producer name             | Name of primary operator   | Enrollment    |
| Underserved status        | Indicator the primary operator is considered underserved and/or a small producer | Enrollment    |
| Total area                | Total area of enrolled operation   | Annual        |
| Total crop area           | Total crop area in enrolled operation enrolled                                   |               |
| Total livestock area      | Total livestock confinement, pasture and rangeland in enrolled operation         | Annual        |
| Total forest area         | Total forest area in enrolled operation  |               |
| Livestock type            | Top 3 types of livestock on enrolled operation                                   | Annual        |
| Livestock head            | Total livestock currently managed (by type)                                      | Annual        |
| Organic farm              | Indicator that part of the farm is certified or transitioning organic            | Annual        |
| Organic fields            | Indicator that any of the enrolled fields are certified or transitioning organic | Annual        |
| Producer motivation       | Motivation for participation   | Annual        |
| Producer outreach         | Top 3 types of outreach provided to producer                                     | Annual        |
| CSAF experience           | Indicator of prior implementation of CSAF practices at this farm                 | Annual        |
| CSAF federal funds        | Indicator of prior receipt of federal funds for CSAF practices                   | Annual        |
| CSAF state or local funds | Indicator of prior receipt of state funds for CSAF practices                     | Annual        |
| CSAF nonprofit funds      | Indicator of prior receipt of nonprofit funds for CSAF practices                 | Annual        |
| CSAF market incentives    | Indicator of prior receipt of market incentives for CSAF practices               | Annual        |

Version 1.0 Page 6 of 87

## Field Enrollment

These data will be collected about each field enrolled in the project. In this worksheet, each row corresponds to one field x commodity combination enrolled in the project. Generally, data are reported once for each field, at its initial enrollment. The quarterly submission should contain information about each field initially enrolled in the project during that quarter. If no fields are enrolled during that quarter, do not complete this worksheet for that quarter. If a field is enrolled for multiple years, any relevant changes, such as a new ID number or changes to the commodity or practice combinations should be entered in this worksheet during the quarter it is re-enrolled, or as applicable.

Table 5. Field Enrollment elements

| Data element name                    | Description  |  |  |
|--------------------------------------|--|--|--|
| Farm ID                              | Unique Farm ID assigned by FSA   |  |  |
| Tract ID                             | Unique Tract ID assigned by FSA  |  |  |
| Field ID                             | Unique Field ID assigned by FSA  |  |  |
| State or territory of field          | State name   |  |  |
| Physical County of field             | Physical county name must match FSA farm records                               |  |  |
| Prior Field ID                       | Previous Field ID when reconstitution of farm results in new Field IDs         |  |  |
| Field data change                    | Indicator that field data has changed from initial enrollment                  |  |  |
| Contract start date                  | Start date of contract   |  |  |
| Total field area                     | Size of enrolled field   |  |  |
| Commodity category                   | Category of commodity(ies) produced  |  |  |
| Commodity type                       | Type of commodity(ies) produced  |  |  |
| Baseline yield                       | Average yield of commodity in 3 years prior to enrollment                      |  |  |
| Baseline yield location              | Location for which baseline yield is provided                                  |  |  |
| Field land use                       | Most common land use in field in past 3 years                                  |  |  |
| Field irrigated                      | Most common irrigation type in field in past 3 years                           |  |  |
| Field tillage                        | Most common tillage in field in past 3 years                                   |  |  |
| Practice past extent - farm          | Extent of operation that implemented this practice prior to project enrollment |  |  |
| Field any CSAF practice              | Indicator for prior CSAF practices in this field in past 3 years               |  |  |
| Practice past use - this field       | Indicator of prior use of this practice in this field in the past 3 years      |  |  |
| Practice type                        | CSAF practice(s) that will be implemented in enrolled field (up to 7)          |  |  |
| Practice standard                    | Organization that developed CSAF practice standard implemented in field        |  |  |
| Planned practice implementation year | Year that practice is planned to be implemented                                |  |  |
| Practice extent                      | Area or number of animals for which practice is implemented                    |  |  |
| Follow-on questions                  | Follow-on questions by practice type (see Table 11)                            |  |  |

Version 1.0 Page 7 of 87

## Farm Summary

These data will be collected about each farm enrolled in the project. In this worksheet, each row will correspond to one farm that has at least one field enrolled in the project. The quarterly submission should contain updates to any data elements that have changed for each farm enrolled in the project during that quarter. If there are no changes from the previous quarter, do not complete this worksheet for that quarter. Data are not cumulative.

Table 6. Farm Summary elements

| Data element name         | Description  | Frequency |  |
|---------------------------|--|-----------|--|
| Farm ID                   | Unique Farm ID assigned by FSA   |           |  |
| State or territory        | State name   |           |  |
| County of residence       | County name  |           |  |
| Producer TA received      | Type of technical assistance provided to producer                            | Quarterly |  |
| Producer incentive amount | Total financial incentive provided to the producer                           | Quarterly |  |
| Incentive reason          | Top 4 reason(s) for financial incentives provided to producer                | Quarterly |  |
| Incentive structure       | Top 4 units on which financial incentives are structured                     | Quarterly |  |
| Incentive type            | Top 4 type(s) of financial incentives provided to producer                   | Quarterly |  |
| Payment on enrollment     | Extent of payment provided to producer upon enrollment                       | Quarterly |  |
| Payment on implementation | Extent of payment provided to producer upon implementation of CSAF practices | Quarterly |  |
| Payment on harvest        | Extent of payment provided to producer upon harvest or slaughter             | Quarterly |  |
| Payment on MMRV           | Extent of payment provided to producer upon reporting or verification        | Quarterly |  |
| Payment on sale           | Extent of payment provided to producer upon sale of commodity                | Quarterly |  |

Version 1.0 Page 8 of 87

#### Field Summary

These data will be collected about each field enrolled in the project for a commodity x practice(s) combination. In this worksheet, each row will correspond to one field x commodity x practice(s) combination enrolled in the project. Data for each field will be reported quarterly and are not cumulative. Report data for any elements that have an update in that quarter. Greenhouse gas benefit estimates must be entered upon practice completion or annually, as appropriate. If there are no changes from the previous quarter, do not complete this worksheet for that quarter. This worksheet includes a section to report the "official" estimate of GHG benefits – amounts of greenhouse gas emissions reduced and carbon sequestered – for the field. These quantities refer to the estimates that are used to calculate the project's aggregate impact (reported in Table 1). Tables 8 and 9 are used to report alternate estimates of the field-level GHG benefits when additional methods are used to model (Table 8) or measure (Table 9) these impacts. Any field that can use COMET-Planner must submit those results, either as the official or alternate model.

Table 7. Field Summary elements

| Data element name              | Description  | Frequency |
|--------------------------------|--|-----------|
| Farm ID                        | Unique Farm ID assigned by FSA   |           |
| Tract ID                       | Unique Tract ID assigned by FSA  |           |
| Field ID                       | Unique Field ID assigned by FSA  |           |
| State or territory of field    | State name   |           |
| County of field                | County name  |           |
| Commodity type                 | Type of commodity produced from field  | Quarterly |
| Practice type                  | Type of practice(s) incentivized in field (up to seven)                                      | Quarterly |
| Date practice complete         | Date that practice implementation is certified complete                                      | Quarterly |
| Contract end date              | End date of contract   | Quarterly |
| MMRV assistance provided       | Indicator that MMRV assistance is provided to field  | Quarterly |
| Marketing assistance provided  | Indicator that marketing assistance provided for commodity from field                        | Quarterly |
| Incentive per acre or head     | Indicator that a per acre/head incentives is provided for the CSAF practice(s) on this field | Quarterly |
| Field commodity value          | Value of commodity produced from field   | Quarterly |
| Field commodity volume         | Volume of commodity produced from field  | Quarterly |
| Cost of implementation         | Total cost of practice implementation in field   | Quarterly |
| Cost coverage                  | Percent of total cost of implementation of practice covered by project incentives            | Quarterly |
| Field GHG monitoring           | Methods used to monitor GHG benefits in field (up to 3)                                      | Quarterly |
| Field GHG reporting            | Methods used to report on GHG benefits for field (up to 3)                                   | Quarterly |
| Field GHG verification         | Methods used to verify GHG benefits for field (up to 3)                                      | Quarterly |
| Field GHG calculations         | Methods used to calculate GHG benefits for field   | Quarterly |
| Field official GHG calculation | Method used to calculate official GHG benefits for field                                     | Quarterly |
| Field official GHG ER          | Official estimate of total GHG emission reductions for field                                 | Quarterly |
| Field official carbon stock    | Official estimate of total carbon sequestration for field                                    | Quarterly |
| Field official CO2 ER          | Official estimate of total CO2 emission reductions for field                                 | Quarterly |
| Field official CH4 ER          | Official estimate of total CH4 emission reductions for field                                 | Quarterly |
| Field official N2O ER          | Official estimate of total N2O emission reductions for field                                 | Quarterly |
| Field offsets produced         | Amount of carbon offsets produced in field   | Quarterly |
| Field insets produced          | Amount of carbon insets produced in field  | Quarterly |
| Other field measurements       | Indicator that field data was collected for reasons other than GHG benefit estimation        | Quarterly |

Version 1.0 Page 9 of 87

#### GHG Benefits - Alternate Modeled

If greenhouse gas benefits are modeled for the same field using multiple methods, the results for the alternate models are reported in this worksheet. The "alternate" models refer to those model results that were not used in the calculation of the project's aggregate impact (as reported in Table 1). Any field that can use COMET-Planner must submit those results, either as the official or alternate model. These data will be collected about the modeled GHG benefits for each field x commodity x practice(s) combination. In this worksheet, each row will correspond to one field enrolled in the project. Data are not cumulative. Each quarterly submission should include information for all fields that have new modeled data. Greenhouse gas benefit estimates must be entered upon practice completion or annually, as appropriate.

Table 8. GHG Benefits - Alternate Modeled elements

| Data element name Description |  | Frequency |
|-------------------------------|--|-----------|
| Farm ID                       | Unique Farm ID assigned by FSA                           |           |
| Tract ID                      | Unique Tract ID assigned by FSA                          |           |
| Field ID                      | Unique Field ID assigned by FSA                          |           |
| State or territory of field   | State name   |           |
| County of field               | County name  |           |
| Commodity type                | Type of commodity(ies) produced from the field (up to 6) | Annual    |
| Practice type                 | Type of practice(s) incentivized in field (up to 7)      | Annual    |
| GHG model                     | Model used to calculate GHG benefits                     | Annual    |
| Model start date              | Start date of model run                                  | Annual    |
| Model end date                | End date of model run                                    | Annual    |
| Total GHG benefits estimated  | Estimate of total GHG benefits for field                 | Annual    |
| Total carbon stock estimated  | Estimate of total change in carbon stock for field       | Annual    |
| Total CO2 estimated           | Estimate of total CO2 emission reductions for field      | Annual    |
| Total CH4 estimated           | Estimate of total CH4 emission reductions for field      | Annual    |
| Total N2O estimated           | Estimate of total N2O emission reductions for field      | Annual    |

Version 1.0 Page **10** of **87** 

## GHG Benefits - Measured

Projects must report the results of any carbon stock or greenhouse gas emission measurements in this worksheet. These data will be collected at the field level. Each row will represent a separate measurement method used to calculate GHG benefits for a given field. Data are reported once per year of measurement and are not cumulative. Each quarterly submission should include information for any field for which there are new soil samples or new calculations of annual GHG benefits based on actual measurements.

Table 9. GHG Benefits - Measured data elements

| Data element name                    | Description                           | Frequency |
|--------------------------------------|---------------------------------------|-----------|
| Farm ID                              | Unique Farm ID assigned by FSA        |           |
| Tract ID                             | Unique Tract ID assigned by FSA       |           |
| Field ID                             | Unique Field ID assigned by FSA       |           |
| State                                | State name                            |           |
| County                               | County name                           |           |
| GHG measurement method               | Method of measurement                 | Annual    |
| Lab name                             | Entity that conducted analysis        | Annual    |
| Measurement start date               | Start date of measurements            | Annual    |
| Measurement end date                 | End date of measurements              | Annual    |
| Total CO2 reduction calculated       | Calculation of total CO2 reduction    | Annual    |
| Total carbon stock change calculated | Calculation of change in carbon stock | Annual    |
| Total CH4 reduction calculated       | Calculation of total CH4 reduction    | Annual    |
| Total N2O reduction calculated       | Calculation of total N2O reduction    | Annual    |
| Soil sample result                   | Numeric result from soil sample       | Annual    |
| Measurement type                     | Type of analysis conducted            | Annual    |

Version 1.0 Page **11** of **87** 

## Additional Environmental Benefits

Projects that track additional environmental benefits (e.g., water quality improvements) from enrolled fields report results in this worksheet. These data will be collected about each field. Each row in this worksheet will correspond to an enrolled field. Data are not cumulative. Estimates of environmental benefits must be entered upon practice completion or annually, as appropriate.

Table 10. Additional Environmental Benefits elements

| Data element name            | Description  | Frequency |
|------------------------------|--|-----------|
| Farm ID                      | Unique Farm ID assigned by FSA                                 |           |
| Tract ID                     | Unique Tract ID assigned by FSA                                |           |
| Field ID                     | Unique Field ID assigned by FSA                                |           |
| State                        | State name   |           |
| County                       | County name  |           |
| Environmental benefits       | Indicator that project tracks other environmental benefits     | Annual    |
| Reduction in nitrogen loss   | Indicator that project tracks reductions in nitrogen loss      | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |
| Reduction in phosphorus loss | Indicator that project tracks reductions in phosphorus loss    | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |
| Other water quality          | Indicator that project tracks other water quality improvements | Annual    |
| Туре                         | Type of water quality metric being tracked                     | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |
| Water quantity               | Indicator that project tracks reduced water use                | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |
| Reduced erosion              | Indicator that project tracks reductions in soil erosion       | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |
| Reduced energy use           | Indicator that project tracks reductions in energy use         | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |
| Avoided land conversion      | Indicator that project tracks reductions in land conversion    | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |
| Improved wildlife habitat    | Indicator that project tracks improvements in wildlife habitat | Annual    |
| Amount                       | Amount   | Annual    |
| Purpose                      | Purpose of tracking those co-benefits                          | Annual    |

Version 1.0 Page 12 of 87

#### Supplemental Data Submission

Project MMRV Plan

Definition of MMRV elements:

**Measurement**: Quantification of the greenhouse gas benefits (reduction or capture) using mathematical models and/or direct physical measurements in the field

**Monitoring**: Ongoing review and confirmation that the climate-smart practice has been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time

**Reporting**: Documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization

**Verification**: Independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable.

Projects must submit an MMRV plan that includes details about how each of the following are addressed:

- · Quantification approach, including:
  - GHG models used
  - GHG measurement plan (if applicable)
  - Approach to quantifying additional environmental benefits, if applicable (e.g., water quality, habitat)
- Verification approach:
  - Compliance criteria
  - Verification plan/methodology
- Approach to ensuring:
  - Additionality
  - Permanence
  - Leakage
  - Impacts of weather
- Plan for non-compliance

If the project is using a specific MMRV methodology or approach developed by the recipient, a project partner, or an outside organization, the project can submit documentation associated with the methodology as long as the documentation addresses each of the above categories.

If the project is tracking other environmental benefits (as reported in the Additional Environmental Benefits worksheet), include a description of the methodology and tools used to track and report on these benefits.

#### Field modeled GHG benefit reports

Results from any models besides COMET-Planner used to estimate GHG benefits must also be submitted as a separate report. This includes projects running COMET-Farm. The full results of any model can be submitted in the native/standard format generated by the modeling tool and must include the following Unique IDs in the report or in the file name: State, County, Farm ID, Tract ID, Field ID.

## Field direct measurement results

For any direct physical measurements in the field, measurement results must be submitted as a separate report and must include the following Unique IDs in the report or in the file name: State, County, Farm ID, Tract ID, Field ID. Measurement results reports must include the name of the equipment used for sampling or data collection, the name of the lab that analyzed the data, and the analytical method used.

Sample report types include soil analysis reports, summarized results of portable emissions analyzers or flux towers, water quality analyses, and plant species counts. These could be collected for the purposes of determining GHG emission reductions or carbon sequestration amounts, for calibration of tools or models, for tracking other environmental benefits, or for other reasons.

Version 1.0 Page 13 of 87

## **Data Descriptions**

This section provides descriptions and allowable response options for each data element. The guide also indicates whether each data element is required, applicable at times, or optional; as well as how frequently each data element must be updated.

#### Unique IDs

Project ID: Unique ID at the project level – "Award Identifying Number" shown on award documentation

Partner ID: Unique ID at the partner level - use EIN; if no EIN, a unique ID will be assigned for use in these reports

State or territory of operation: State or territory name

County of operation: Physical county name

Farm ID: Unique ID at the operation level assigned by Farm Service Agency (FSA)

**Tract ID:** Unique ID at the tract level assigned by FSA **Field ID:** Unique ID at the field level assigned by FSA

Version 1.0 Page **15** of **87** 

GHG cumulative calculation

Data element name: GHG cumulative Reporting question: What method(s) was used to calculate the

calculation total cumulative GHG benefits reported here?

Description: List the method(s) that was used to calculate the total cumulative GHG benefits reported by the

project this quarter.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Models

Direct field measurements

• Both

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

**Cumulative GHG benefits** 

Data element name: Cumulative GHG Reporting question: What are the project's estimated total GHG

benefits emission reductions (CO2eq) to date?

Description: Total cumulative estimated greenhouse gas emission reductions from practice implementation.

This is updated quarterly. If there are no changes, enter the same number as the previous quarter.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Cumulative carbon stock

Data element name: Cumulative carbon Reporting question: How much carbon has the project

stock sequestered to date?

**Description:** Estimated total cumulative change in carbon stock based on practice implementation. This is updated quarterly. If there are no changes, enter the same numbers as the previous quarter. Conversion rate is

one ton of carbon = 3.67 tons of CO2eq.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Cumulative CO2 benefit

Data element name: Cumulative CO2 Reporting question: What are the project's estimated total

benefit cumulative CO2 emission reductions to date?

Description: Estimated total cumulative carbon dioxide emission reductions based on practice implementation.

This is updated quarterly. If there are no changes, enter the same number as the previous quarter.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub> Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

**Cumulative CH4 benefit** 

Data element name: Cumulative CH4 benefit Reporting question: What are the project's estimated total

CH4 emission reductions to date?

**Description:** Estimated total cumulative methane reduction based on practice implementation. This is updated quarterly. If there are no changes, enter the same numbers as the previous quarter. Conversion rate is one ton

of CH<sub>4</sub> = 25 tons of CO<sub>2</sub>eq.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CH4 reduced in Allowed values: 0-10,000,000

CO<sub>2</sub>eq

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Version 1.0 Page **16** of **87** 

Cumulative N20 benefit

Data element name: Cumulative N2O benefit Reporting question: What are the project's estimated total

N2O emission reductions to date?

Allowed values: 0-10,000,000

**Description:** Estimated total cumulative nitrous oxide reduction based on practice implementation. This is updated quarterly. If there are no updated numbers enter the same number as the previous quarter.

Conversion rate is one ton of  $N_2O = 298$  tons of  $CO_2eq$ .

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons N2O reduced in

CO<sub>2</sub>eq

Data collection level: Project Data collection frequency: Quarterly

Offsets produced

Logic: None - all respond

Data element name: Offsets produced Reporting question: How many carbon offsets have been

produced in the project?

Required: Yes

Description: Total carbon offsets produced by enrolled project fields during the quarter. Offsets are defined as

having been verified and certified using an accepted standard and sold into the carbon marketplace.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO2eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Offsets sale

Data element name: Offsets sale Reporting question: To what marketplace(s) were carbon offsets

sold?

**Description:** Marketplaces to which carbon offsets produced by enrolled project fields were sold. Offsets are defined as having been verified and certified using an accepted standard and sold into the carbon marketplace.

List each marketplace name. Separate names with commas.

Data type: Text Select multiple values: NA

Measurement unit: Name Allowed values: Text

Logic: Respond if >0 to 'Offsets produced' Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Offsets price

Data element name: Offsets price Reporting question: What was the average price of carbon

received for offsets?

Allowed values: 0-500

**Description:** Average price per metric ton paid for carbon offsets produced by enrolled project fields. Offsets are defined as having been verified and certified using an accepted standard and sold into the carbon marketplace.

Data type: Decimal Select multiple values: No

Measurement unit: Dollars per metric ton

Logic: Respond if >0 to 'Offsets produced'

Required: Yes

Data collection level: Project

Data collection frequency: Quarterly

Insets produced

Data element name: Insets produced Reporting question: How many carbon insets have been

produced in the project?

**Description:** Total carbon insets produced by enrolled fields during the quarter. Insets are defined as having been verified and certified using an accepted standard and accounted for within Scope 3 emissions for a firm.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Version 1.0 Page 17 of 87

Cost of on-farm TA

Data element name: Cost of on-farm TA Reporting question: What is the total amount that has been

spent to provide on-farm TA?

**Description:** Total cost of any field- or practice-specific technical assistance provided by the project (by recipient or partners) to any producers. This is updated quarterly. If there are no changes, enter the same number as the

previous quarter.

Data type: DecimalSelect multiple values: NoMeasurement unit: DollarsAllowed values: \$0-\$50,000,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

MMRV cost

Data element name: MMRV cost Reporting question: What is the total amount that has been

spent on MMRV activities?

**Description:** Total cost of all MMRV activities paid for by the project (recipient or partners). MMRV components are defined as measurement (calculations or estimations of GHG emissions), monitoring (ongoing review and confirmation that the climate-smart practices have been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time), reporting (documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization), and verification (independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable). This is updated quarterly. If there are no changes, enter the same number as the previous quarter.

Data type: Decimal Select multiple values: No
Measurement unit: Dollars Allowed values: \$0-\$50,000,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

**GHG** monitoring method

Data element name: GHG monitoring 1-5 Reporting question: How did the project monitor GHG benefits?

**Description:** Up to the five most common forms of monitoring GHG benefits used this quarter as part of MMRV requirements. Monitoring is defined as ongoing review and confirmation that the climate-smart practice has been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time. Include up to 5 methods, based on which methods are most commonly used for this project. The worksheet provides five columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 5 GHG monitoring methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG monitoring methods as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Drones

Ground-level photos and videos

On-farm visit

Plot-based sampling

Producer records or attestation

Satellite monitoring or remote sensing

Soil metagenomics

Soil sensors

Water sensors

Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Version 1.0 Page 18 of 87

#### **GHG** reporting method

Data element name: GHG reporting 1-5

**Reporting question:** How did the project track and report implementation of practices to reduce GHG emissions?

**Description:** Up to the five most common forms of tracking and reporting on practice implementation used this year as part of MMRV requirements. Reporting is defined as documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization. Include up to 5 methods, based on which methods are most commonly used for this project. The worksheet provides five columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 5 GHG reporting methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG reporting methods as free text.

Data type: List Select multiple values: No

Measurement unit: Category

#### Allowed values:

- Automated devices
- Email
- Mobile app
- Paper
- · Third-party actors
- Website
- Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

#### GHG verification method

**Data element name:** GHG verification method 1-5

**Reporting question:** How did the project verify implementation of practices to reduce GHG emissions?

**Description:** Up to the five most common forms of verifying practice implementation used this year as part of MMRV requirements. Verification is defined as independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable. Include up to 5 methods, based on which methods are most commonly used for this project. The worksheet provides five columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 5 GHG verification methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG verification methods as free text.

Data type: List Select multiple values: No

Measurement unit: Category

# Allowed values:

- Artificial intelligence
- Audit by recipient
- Computer modeling
- Photos
- Record audit
- Satellite imagery
- Site or field visit
- Third-party audit
- Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Project Data

Version 1.0 Page **21** of **87** 

#### Total match contribution

Data element name: Total match contribution

**Reporting question:** What is the total match value the organization has contributed to the project to date?

**Description:** Cumulative (total) value of funds and in-kind contributions (e.g., staff time, inputs, equipment rental, marketing support) that the partner has provided as a project match contribution from the start of the partnership to the end of the reporting quarter. For each quarter's data entry, the value must be the sum of all previous entries plus match contributions in the reporting quarter. If there are no changes, report the value from the previous quarter.

Data type: Decimal Select multiple values: NA

Measurement unit: Dollars Allowed values: \$0-\$100,000,000

Logic: None – all respond Required: Yes

Data collection level: Partner Data collection frequency: Quarterly

#### Total match incentives

Data element name: Total match incentives

**Reporting question:** What is the total value of match provided by this organization for producer incentives?

**Description:** Cumulative (total) value of funds for incentive payments directly to producers that the partner has provided as a project match contribution from the start of the partnership to the end of the reporting quarter. For each quarter's data entry, the value must be the sum of all previous entries plus match incentives in the reporting quarter. If there are no changes, report the value from the previous quarter.

Data type: Decimal Select multiple values: NA

Measurement unit: Dollars Allowed values: \$0-\$100,000,000

Logic: None – all respond Required: Yes

Data collection level: Partner Data collection frequency: Quarterly

#### Match type

Data element name: Match type 1-3

**Reporting question:** What types of match contributions has the organization provided to the project?

**Description:** Types of match contributions other than incentives provided directly to producers by the organization from the start of the partnership to the end of the reporting quarter. Enter up to the top three (in dollar value) types of match contributions provided. In-kind staff time could be used for technical assistance, marketing assistance, or other support to producers. Production inputs include seed, fertilizer, pesticides, equipment and other inputs for use in the field. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 match types are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other match types as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

- Equipment rental or use
- In-kind staff time
- Production inputs (reduced cost or free)
- Program income
- Software
- Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Partner Data collection frequency: Quarterly

Version 1.0 Page 22 of 87

Match amount

Data element name: Match amount 1-3 Reporting question: What is the value of the match

contributions the organization provided to the

project?

Description: Cumulative (total) value of funds for each match type that the organization has provided as a project match contribution from the start of the partnership to the end of the reporting quarter. Enter amounts for up to the top three (in dollar value) match types. The worksheet provides three columns for this data element. Enter one value for each column. If fewer than 3 match types are used, leave unnecessary columns

blank.

Data type: Decimal Select multiple values: NA

Measurement unit: Dollars Allowed values: \$0-\$100,000,000

Logic: None - all respond Required: Yes

Data collection level: Partner Data collection frequency: Quarterly

Training type provided

Reporting question: What types of training has the Data element name: Training type 1-3 provided

organization provided to project partners?

**Description:** Types of training provided to the project partner as a result of participating in the project during the past quarter. Training can come from the recipient, a project partner organization (including other divisions of their own organization, or an outside organization. Enter up to the top three (in dollar value) types of partner training provided. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 training types are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other training types as free text.

Data type: List Select multiple values: No

Allowed values: Measurement unit: Category

- Data collection
- Grant reporting
- Marketing opportunities
- Providing financial assistance
- Providing technical assistance
- Writing producer contracts

Other (specify)

Logic: None - all respond Required: Yes

Data collection frequency: Quarterly Data collection level: Partner

Activity by partner

Data element name: Activity 1-3 by partner Reporting question: What types of activities has the

organization provided to the project?

Description: Types of activities that the recipient or partner organization has provided during the reporting quarter. Enter up to the top three (in dollar value) types of activities undertaken. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 activity types are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other activity types as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values: Marketing support

- MMRV support
- Producer outreach for enrollment
- Technical assistance to producers
- Training to other partner organizations

Other (specify)

Logic: None - all respond Required: Yes

Data collection level: Partner Data collection frequency: Quarterly

Version 1.0 Page 23 of 87

**Activity cost** 

Data element name: Activity cost 1-3 Reporting question: What is the value of the activities

this organization has provided to the project?

**Description:** Cumulative (total) cost of each activity type that the organization has undertaken or offered from the start of the partnership to the end of the reporting quarter. Enter amounts for up to the top three (in dollar value) activity types. The worksheet provides three columns for this data element. Enter one value for each

column. If fewer than 3 activity types are provided, leave unnecessary columns blank.

Data type: Decimal Select multiple values: NA

Measurement unit: Dollars Allowed values: \$0-\$100,000,000

Logic: None – all respond Required: Yes

Data collection level: Partner Data collection frequency: Quarterly

**Products supplied** 

Data element name: Products supplied Reporting question: What products or supplies were

provided to enrolled fields?

**Description:** Name(s) of products supplied to enrolled producers as incentives or matching contributions. Enter the name of each product, including its brand. Separate each product name with a comma. If no products or

supplies were provided by the organization, leave the column blank.

Data type: Text Select multiple values: NA

Measurement unit: Name Allowed values: Text

Logic: None – all respond Required: Yes

Data collection level: Partner Data collection frequency: Quarterly

**Product source** 

Data element name: Product source Reporting question: Which companies provided the

supplies?

**Description:** Name of firm or company from which supplies were obtained.

Data type: Text Select multiple values: NA

Measurement unit: Name Allowed values: Text

**Logic:** Respond if text entered for 'Products supplied' **Required:** Yes

Data collection level: Partner Data collection frequency: Quarterly

# Marketing Activities

Commodity type

Data element name: Commodity type Reporting question: What type of commodity is produced by

the farmers enrolled in this project?

Description: List a single commodity produced or marketed through incentives from this project. If multiple commodities are produced by the project, use additional rows of the worksheet to report each commodity. Use

the FSA commodity list in Appendix B and choose the commodity from the list. Select multiple values: No Data type: List

Measurement unit: Category Allowed values: FSA commodity list

Logic: None - all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Marketing channel type

Data element name: Marketing channel Reporting question: What type of marketing channel is used to

sell this commodity?

Description: List a single type of marketing channel used to sell the commodity produced by farmers enrolled in the project. If a single commodity is marketed through multiple channels, use additional rows of the worksheet to report each combination of commodity and marketing channel. If "other" is chosen, use the additional column to enter the other marketing channel type(s) as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Agricultural marketing board

Biorefinery

Commodity broker

Direct to consumer

Direct to institution

Direct to restaurant

Distributor (including grain elevators)

Food hub or cooperative

Food processor

Non-food byproducts processor

Retailer

USDA

Other (specify)

Logic: None - all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Number of buyers

Data element name: Number of buyers Reporting question: How many buyers are there in this

marketing channel?

**Description:** List the number of individual firms or buyers in this marketing channel.

Data type: Integer Select multiple values: No Allowed values: 1-500 Measurement unit: Count

Logic: None - all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Page 25 of 87 Version 1.0

Names of buyers

Data element name: Names of buyers Reporting question: What are the names of all of the buyers in

this marketing channel?

Description: Provide the names of all buyers in this marketing channel. Separate each name with a comma.

Data type: Text Select multiple values: NA

Measurement unit: Name Allowed values: Text

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Marketing channel geography

Data element name: Marketing channel Reporting question: What is the primary geography of the

geography marketing channel?

**Description:** The primary geography of the type of marketing channel. Primary geography means the scale at which most of the activity of buying and selling happens. Local means within a single state or directly neighboring states. Regional means within a five-to-ten state area. National means across the United States. International means specific locations outside of the United States. Global means across the world or not to a

specific international location.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

# USDA Partnerships for Climate-Smart Commodities Data Dictionary for Recipients February 2023

Volume sold unit

Data element name: Volume sold unit Reporting question: What is the unit of volume?

Description: The unit associated with the volume of the commodity sold in the marketing channel. If "other" is

chosen, use the additional column to enter the appropriate unit as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Bales (500 pounds)

Bushels

Carcass pounds

Gallons

Kilograms

Linear board feet

Liveweight pounds

Metric tons

Pounds

Short tons

Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Price premium

Data element name: Price premium Reporting question: What price premium is received for the

commodity sold in this marketing channel?

Description: The price premium received for the commodity sold in this marketing channel this quarter. Price

premium is the amount received above a 'business as usual' price.

Data type: Decimal Select multiple values: No

Measurement unit: Dollars Allowed values: \$0.01-\$10,000

Logic: None – all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Price premium unit

Data element name: Price premium unit Reporting question: What is the unit for the price premium?

Description: The unit associated with the price premium for the commodity sold in the marketing channel. If

"other" is chosen, use the additional column to enter the appropriate unit as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Per bale (500 pounds)

Per bushel

Per carcass pound

Per gallon

Per kilogram

Per linear board foot

Per live pound

Per metric ton

Per ounce

Per short ton

Other (specify)

Logic: None – all respond Required: Yes

Price premium to producer

Data element name: Price premium to Reporting question: What percent of the price premium is

provided to the producer for the commodity sold in this producer

marketing channel?

**Description:** The percent of the price premium provided to the producer for the commodity sold in this marketing channel this quarter. Price premium is the amount received above a 'business as usual' price.

Data type: Decimal Select multiple values: No Allowed values: 0-100 Measurement unit: Percent

Logic: None - all respond Required: Yes

Data collection level: Project Data collection frequency: Quarterly

Product differentiation method

Data element name: Product differentiation method 1-3 Reporting question: What methods are used

to differentiate climate-smart commodities in

this marketing channel?

Description: Provide the methods used to differentiate the climate-smart commodity in this market channel. Product differentiation methods are ways to distinguish or differentiate the climate-smart commodity in the marketplace. Include up to 3 methods, based on which methods are most commonly used for this project. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 product differentiation methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other product differentiation methods as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

- Certification/verification for internal insetting
- Farm certification
- Label or badge used on packaging or marketing
- Third party certification/verification
  - Trademark Other (specify)

Logic: None - all respond Required: Yes

# Underserved status

Data element name: Underserved status

**Reporting question:** Is this producer considered an underserved and/or a small producer?

**Description:** Underserved status of the primary operator of the enrolled operation. Underserved producers generally include beginning farmers, socially disadvantaged farmers, veteran farmers, and limited resource farmers; women farmers and producers growing specialty crops are generally also included in these categories. Small farms are generally those with less than \$350,000 in annual gross cash farm income. Indicate whether this producer is considered underserved, a small producer, or both underserved and a small producer. Use "I don't know" if the producer declines to answer. Departmental Regulation 4370-001 provides USDA's policies for collecting demographic data, including race, ethnicity and gender. Providing demographic information is voluntary and at the discretion of the customer. Demographic information is used by USDA for statistical purposes only and will not be used to determine an applicant's eligibility for programs or services for which they apply.

Data type: List Select multiple values: No

Measurement unit: Category

Allowed values:

- Yes, underservedYes, small producer
- · Yes, underserved and small producer
- No
- I don't know

Required: No

Data collection level: Producer Data collection frequency: Initial enrollment

Total area

Data element name: Total area Reporting question: What is the total area of the farm?

**Description:** Total area of the farm associated with the Farm ID. Report total area of the farm, even if only a portion of the farm is enrolled in the project. If a producer is enrolled in the project for multiple years, review the total area each time a new contract is signed and provide any necessary updates.

Data type: List Select multiple values: No

Measurement unit: Category

Logic: None - all respond

# Allowed values:

Organic fields

Data element name: Organic fields

**Reporting question:** Are any of the fields enrolled in the project currently USDA-certified organic or transitioning to USDA-certified organic?

**Description:** USDA-certified organic means that the operation has been certified by an accredited organic certifying agent or is transitioning to USDA-certified organic by not using any of the prohibited substances. Yes means that some or all of the fields enrolled in the project are certified organic or transitioning to certified organic. No means that no part of the fields enrolled in the project are certified organic or transitioning to certified organic. If a producer is enrolled in the project for multiple years, review the organic certification status of the enrolled fields each time a new contract is signed and provide any necessary updates.

Data type: List Select multiple values: No

| County of field             | nty of field County name (must match FSA farm enrollment data) |  |

Commodity type

Data element name: Commodity type Reporting question: What type of commodity is produced from

this field?

**Description:** Type of commodity produced in field enrolled in the project. See full list in Appendix B. The worksheet provides multiple columns with a drop-down list of the allowed values. Choose one value for each

column. Leave unnecessary columns blank.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values: FSA commodity list

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Practice type

Data element name: Field practice type 1-7 Reporting question: What CSAF practice is being implemented

in this field through the project?

**Description:** Which climate-smart agriculture or forestry (CSAF) practice or practices are being implemented in this project? CSAF practices are included in a list in Appendix A. The worksheet provides seven columns for this data element. Enter one value for each column. If there are fewer than 7 practices being implemented on this field through enrollment in the project, leave unnecessary columns blank.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values: See list in Appendix A

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Date practice complete

Data element name: Date practice complete Reporting question: When did the project certify CSAF practice

implementation as complete?

**Description:** Date that the project certifies that implementation of the CSAF practice is complete on the field. Use January of the year prior to contract year for early adopters, defined as fields that have the practice actively implemented in the year prior to a contract associated with this project is signed). The worksheet provides seven columns for this data element. Enter one value for each column, corresponding to the practice types entered in the previous columns. If there are fewer than 7 practices being implemented on this field through enrollment in the project, leave unnecessary columns blank.

Data type: Date Select multiple values: No

Measurement unit: MM/DD/YYYY Allowed values: 01/01/2023 - 12/31/2030

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Version 1.0 Page 49 of 87

Contract end date

Data element name: Contract end date Reporting question: Contract end date

Description: End date listed on the contract that enrolls the field in the project. If contract end date changes,

submit updated end date during the next quarter's reporting.

Data type: Date Select multiple values: No

Measurement unit: MM/DD/YYYY Allowed values: 01/01/2023 – 12/31/2030

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

MMRV assistance provided

Data element name: MMRV assistance provided Reporting question: Was MMRV assistance provided?

**Description:** Was any MMRV assistance provided to the primary operator for this field? MMRV assistance includes in-field support for the use of technologies, consultation on data collection and input, and other support related to MMRV. MMRV is defined a measurement (calculations or estimations of GHG emissions), monitoring (ongoing review and confirmation that the climate-smart practice has been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time), reporting (documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization), and verification (independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable).

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Yes

No

I don't know

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Marketing assistance provided

Data element name: Marketing assistance provided Reporting question: Was marketing assistance

provided?

**Description:** Was any marketing assistance provided to the primary operator for the commodity(ies) produced from this field? Marketing assistance includes guaranteeing the sale of the commodity(ies), providing a platform for the sale of the commodity(ies), providing a label, branding, or other support related to marketing.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Yes

• No

I don't know

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Incentive per acre or head

Data element name: Incentive per acre or head Reporting question: Is this field receiving a per-acre or

per-head incentive?

Description: Is this field receiving an incentive payment to implement a specific CSAF practice or set of practices

on a per-acre or per-head (livestock) basis?

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Yes

• No

I don't know

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

# USDA Partnerships for Climate-Smart Commodities Data Dictionary for Recipients February 2023

Field commodity value

Data element name: Field commodity value Reporting question: What is the value of the commodity

produced on the enrolled field?

**Description:** The dollar value of the commodity produced on the enrolled field.

Data type: Decimal Select multiple values: No

Measurement unit: Dollars Allowed values: \$1-\$10,000,000

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field commodity volume

Data element name: Field commodity volume Reporting question: What is the volume of commodity

produced on the enrolled field?

Description: The volume of the commodity produced on the enrolled field

Data type: Decimal Select multiple values: No

Measurement unit: Number Allowed values: 1-10,000,000

Data collection level: Field Data collection frequency: Quarterly

Field commodity volume unit

Logic: None - all respond

Data element name: Field commodity volume Reporting question: What is the unit of volume?

unit

Description: The unit associated with the volume of the commodity produced on the enrolled field. If "other" is

Required: Yes

chosen, enter the appropriate value in the additional column.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Bushels

Carcass weight pounds

GallonsHead

Linear feet

Liveweight pounds

Pounds

Tons Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Cost of implementation

Data element name: Cost of implementation Reporting question: What is the cost of practice

implementation in the field?

Description: Total annual estimated cost per unit of implementing the practice(s) in the enrolled field.

Data type: Decimal Select multiple values: No

Measurement unit: Dollars Allowed values: \$1-\$10,000,000

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Version 1.0 Page 51 of 87

Cost unit

Data element name: Cost unit Reporting question: What is the unit for cost?

Description: The unit associated with the cost of implementing CSAF practices in the field. If "other" is chosen,

enter the appropriate value in the additional column.

Data type: List Select multiple values: No

Measurement unit: Category

Allowed values:

Per acre

Per bushel

Per head

Per linear foot

Per pound

Per pour

Per ton

Other (specify)

Logic: None – all respond

Data collection level: Field Data collection frequency: Quarterly

Cost coverage

Data element name: Cost coverage Reporting question: What percent of the practice cost is

covered by the incentive?

Description: Estimated proportion of total annual cost of implementing the practice(s) that is covered by project

Required: Yes

incentives.

Data type: Integer Select multiple values: No Measurement unit: Percent Allowed values: 0-100

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field GHG monitoring

Data element name: Field GHG monitoring Reporting question: How were GHG impacts monitored in this

1-3 field?

**Description:** Up to the top three forms of monitoring GHG benefits as part of MMRV requirements. Monitoring is defined as ongoing review and confirmation that the climate-smart practice has been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time. Include up to 3 methods, based on which methods are most commonly used for this field. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 GHG monitoring methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG monitoring methods as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Drones

Ground-level photos and videos

On-farm inspection

Plot-based sampling (e.g., soil, water)

Producer records or attestation

Satellite monitoring or remote sensing

Soil metagenomics

Soil sensors

Water sensors

Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Version 1.0 Page 52 of 87

# Field GHG reporting

**Data element name:** Field GHG reporting **Reporting question:** How were GHG benefits reported for this field?

**Description:** Up to the top three forms of reporting on GHG benefits as part of MMRV requirements. Reporting is defined as documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization. Include up to 3 methods, based on which methods are most commonly used for this field. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 GHG reporting methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG reporting methods as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

- Automated devices
- Email
- Mobile app
- Paper
- Third-party actors
- Website
- Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

# Field GHG verification

Data element name: Field GHG verification Reporting question: How was implementation of practices to reduce GHG emissions verified for this field?

**Description:** Up to the top three of verification of GHG benefits as part of MMRV requirements. Verification is defined as independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable. Include up to 3 methods, based on which methods are most commonly used for this field. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 GHG verification methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG verification methods as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

- · Artificial intelligence
- Computer modeling
- Recipient audit
- Photos
- Record audit
- Satellite imagery
- Site or field visit
- Third-party audit
- Other (specify)

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Version 1.0 Page 53 of 87

Field GHG calculations

Data element name: Field GHG Reporting question: What methods are used to calculate GHG

calculations benefits in this field?

**Description:** List the method(s) used to calculate GHG benefits in this field. If yes to direct physical

measurements, submit result reports (see Supplemental Data Submission - Field direct GHG measurement

results).

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Models

Direct field measurements

Both

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field official GHG calculation

Data element name: Field official GHG Reporting question: What method was used to calculate the

calculation official GHG benefits in this field?

Description: List the method used to calculate the official GHG benefits in this field that are reported as part of

the project's aggregate impact.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Models

Direct field measurements

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field official GHG ER

**Data element name:** Field official GHG Reporting question: What are the estimated total GHG emission

emission reductions reductions (CO2eq) in this field?

**Description:** Estimated greenhouse gas emission reductions from practice implementation in this field that are reported as part of the project's aggregate impact. This data element must be entered upon practice completion

or annually, as appropriate.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field official carbon stock

Data element name: Field official carbon Reporting question: How much carbon has been sequestered in

stock this field?

**Description:** Estimated total change in carbon stock based on practice implementation in this field. This data element can be reported in any quarter and is cumulative for the year. Conversion rate is one ton of carbon =

3.67 tons of CO₂eq.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Version 1.0 Page 54 of 87

Field official CO2 ER

Data element name: Field official CO2 Reporting question: What are the estimated total CO2 emission

emission reductions reductions in this field?

**Description:** Estimated total carbon dioxide emission reductions based on practice implementation in this field that are reported as part of the project's aggregate impact. This data element must be entered upon practice

completion or annually, as appropriate.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub> Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field official CH4 ER

Data element name: Field official CH4 emission Reporting question: What are the estimated total CH4

reductions emission reductions in this field?

**Description:** Estimated total methane emission reductions based on practice implementation in this field that are reported as part of the project's aggregate impact. This data element must be entered upon practice

Allowed values: 0-10,000,000

Allowed values: 0-10,000,000

completion or annually, as appropriate. Conversion rate is one ton of  $CH_4 = 25$  tons of  $CO_2$ eq.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CH4 reduced in

CO<sub>2</sub>eq

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field official N20 ER

Data element name: Field official N2O emission Reporting question: What are the estimated total N2O

reductions emission reductions in this field?

**Description:** Estimated total nitrous oxide emission reductions based on practice implementation in this field that are reported as part of the project's aggregate impact. This data element must be entered upon practice

completion or annually, as appropriate. Conversion rate is one ton of  $N_2O = 298$  tons of  $CO_2eq$ .

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons N2O reduced in

CO₂eq

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Field offsets produced

Data element name: Field offsets produced Reporting question: How many carbon offsets have been

produced in this field?

Description: Total carbon offsets produced in the field during the quarter (not cumulative). Offsets are defined

as having been verified and certified using an accepted standard and sold into the carbon marketplace.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Version 1.0 Page 55 of 87

Field insets produced

Data element name: Field insets produced Reporting question: How many carbon insets have been

produced in this field?

**Description:** Total carbon insets produced in the field during the quarter (not cumulative). Insets are defined as having been verified and certified using an accepted standard and accounted for within Scope 3 emissions for a

firm.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: Yes

Data collection level: Field Data collection frequency: Quarterly

Other field measurement

Data element name: Other field Reporting question: Were data collected from the field for

measurement reasons other than GHG benefit estimation?

**Description:** Direct physical measurements or data collection taken in the field for any reason other than GHG benefits estimation. These reasons could include calibration of GHG estimation tools or models, tracking other environmental benefits (see Field environmental benefits report), and other reasons. If yes, submit

corresponding reports (see Supplemental data submission - Field direct measurement results).

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Yes

No

I don't know

Logic: None – all respond Required: Yes

Data element name: Measurement start date Reporting question: On what date did the

measurement start?

**Description:** Date that the measurements began. If it was a single point in time, use the same date for start date and end date. If multiple measurements took place over a time period, use the date that the measurements first

began.

Data type: Date Select multiple values: No

Measurement unit: MM/DD/YYYY Allowed values: 01/01/2023 – 12/31/2030

Logic: None – all respond Required: If a project conducts soil samples or takes

carbon stock or greenhouse gas emission

measurements in this field

Data collection level: Field Data collection frequency: Annual

Measurement end date

Data element name: Measurement end date Reporting question: On what date did the

measurement end?

**Description:** Date that the measurements began. If it was a single point in time, use the same date for start date and end date. If multiple measurements took place over a time period, use the date that the measurements

were completed.

Data type: Date Select multiple values: No

Measurement unit: MM/DD/YYYY Allowed values: 01/01/2023–12/31/2030

Logic: None – all respond Required: If a project conducts soil samples or takes

carbon stock or greenhouse gas emission

Data collection level: Field Data collection frequency: Annual

Total CO2 reduction calculated

Data element name: Total CO2 reduction calculated Reporting question: What are

the total measured CO2 emission reductions?

Description: Total annual CO2 emission reductions based on practice implementation in the field calculated

from in-field measurements.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub> Allowed values: 0-10,000,000

Logic: None – all respond Required: If a project takes

carbon stock or greenhouse gas emission measurements in this

field

Data collection level: Field Data collection frequency:

Annual

Total field carbon stock measured

Data element name: Total field carbon stock Reporting question: What is the total amount of

measured carbon sequestered based on repeat measurements

in this field?

**Description:** Change in carbon stock based on practice implementation in the field calculated from repeat soil sampling in this field. (Results for initial field soil samples should be reported in the 'Soil sample result' and

'Measurement type" columns.) Conversion rate is one ton of carbon = 3.67 tons of CO<sub>2</sub>eq.

Data type: Decimal Select multiple values: No

Measurement unit: Metric tons CO<sub>2</sub>eq Allowed values: 0-10,000,000

Logic: None – all respond Required: If a project conducts soil samples or takes

carbon stock measurements in this field

Data collection level: Field Data collection frequency: Annual

Soil sample result unit

Data element name: Soil sample result unit Reporting question: What is unit for the soil sample result?

**Description:** Unit for the corresponding soil sample result. The worksheet provides a drop-down list of choices for this data element. If "other" is chosen, use the additional column to enter the appropriate yield unit as free

text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

PercentPpmGrams

Grams per cubic centimeter

Other (specify)

Logic: None – all respond Required: If a project conducts soil samples in this field

Data collection level: Field Data collection frequency: Annual

Measurement type

Data element name: Measurement type Reporting question: What type of analysis was conducted for

this soil sample?

**Description:** Type of soil analysis conducted. The worksheet provides a drop-down list of choices for this data element. If "other" is chosen, use the additional column to enter the appropriate yield unit as free text.

Data type: List Select multiple values: No

Measurement unit: Category Allowed values:

Organic matterTotal organic carbonBulk density

Other (specify)

Logic: None – all respond Required: If a project conducts soil samples in this field

Data collection level: Field Data collection frequency: Annual

### **CSAF Practice Sub-questions**

For some CSAF practices, there is an additional set of questions that are unique to each practice. Responses to these questions are needed to verify estimated GHG benefits of these practices. If a field is implementing a CSAF practice with an NRCS CPS code in Table 11, answer the follow-up questions listed next to the relevant practice name in the table. Use the *Supplemental Reporting Workbook – CSAF Practice Sub-questions* to report the required information.

Table 11. Follow-on questions for select CSAF practices

| Practice name and code       | Follow-up question   | Options (select one)   |
|------------------------------|--|--|
| Alley Cropping (CPS 311)     | Species category (select most common/extensive type if using more than one)      | Coniferous trees<br>Deciduous trees<br>Shrubs  |
|                              | Species density (number of trees planted per acre)                               | 1-10,000   |

# Partnerships for Climate-Smart Commodities Additional Specific Terms and Conditions February 2023

### I. Overarching Statement

The following award terms and conditions are applicable to Partnerships for Climate-Smart Commodities agreements and are in addition to the USDA FPAC General Terms and Conditions. The award recipient must abide by all terms of this grant including, but not limited to, the General Terms and Conditions, the terms in the Funding Opportunity and associated Frequently Asked Questions, and this addendum. The recipient must also deliver on the planned objectives in the project narrative and budget narrative associated with this grant.

### II. Eligibility and Highly Erodible Lands and Wetlands Compliance

In order to be eligible for an incentive payment as a part of the Partnerships for Climate-Smart Commodities, a producer must:

- Establish Farm Records with the Farm Service Agency (FSA) (have farm, tract, and field numbers in place);
- Complete an AD-2047 (Customer Data Worksheet to facilitate the collection of customer data for Business Partner Record);
- Certify highly erodible land conservation (HEL) and wetland conservation (WC) compliance via Form AD-1026, Highly Erodible Land Conservation (HELC) and Wetland Conservation (WC) Certification; and
- Certify that they are not a foreign person or entity.

Farm, tract, and field numbers are required for the producer, and ultimately the Partnerships for Climate-Smart Commodities recipient, to report climate-smart practice implementation to USDA, as well as to certify and maintain HELC/WC compliance. This will require that some producers who do not already have these numbers, like perennial crop growers or feedlots, establish these records with USDA's FSA. Farm, tract, field numbers, producer name, and Core Customer I.D. (CCID) will be provided by the recipient to the National Program Officer as a part of routine grant reporting. Recipients must ensure that producers receiving financial assistance or incentives through this project use the same name as is included in the relevant FSA Business File for that Farm ID in any contracts or similar documentation kept by the recipient.

Producers are not bound by the payment limitations and the adjusted gross income (AGI) limitations that are in place for other USDA programs.

In order to demonstrate HELC/WC compliance for Partnerships for Climate-Smart Commodities incentive payments, producers will need to request a copy of their subsidiary print from their

USDA FSA field office. The Subsidiary Print includes print year specific eligibility related information about a selected producer. The producer will then provide this documentation to the Partnerships for Climate-Smart Commodities recipients as proof of compliance. A current year subsidiary print will be required for each crop year that the producer receives a payment, and HELC/WC eligibility information is provided under the AD-1026 and Conservation Compliance sections of subsidiary (determined by year, which can change at any time during the year or in a subsequent year). As is the case already, field offices will not be expected to provide documentation to anyone besides the producer themselves (and must always comply with Section 1619 limitations if they ever do provide documentation to third parties). Producers must have control of the land for the term of their beneficiary contract.

Recipients are responsible for determining producer eligibility within the funding opportunity requirements. Recipients must inform producers of eligibility requirements and direct them to local USDA offices for requested information as necessary, including but not limited to, farm and tract establishment and Highly Erodible Land and Wetland Compliance determinations. Privacy of producers is a priority throughout this process, and recipients are responsible for maintaining producer privacy in the process.

At minimum, the recipient will collect and review subsidiary reports from participating producers. They will ensure that the producer is listed as "compliant" in all sections of the conservation compliance portion of subsidiary and "certified" for AD-1026 before an incentive payment is made. If payments to a producer span more than one Federal fiscal year, the recipient will review an updated subsidiary print each fiscal year to ensure that the status is still compliant.

### III. Other Environmental and Cultural Resources Reviews

A Finding of No Significant Impact (FONSI) was signed by USDA NRCS on August 26, 2022. A copy of the Programmatic Environmental Assessment for Partnerships for Climate-Smart Commodities is available at <a href="https://www.usda.gov/climate-smart-commodities">www.usda.gov/climate-smart-commodities</a>. USDA may determine that additional environmental and cultural resources review is needed for any particular action under Partnerships for Climate-Smart Commodities. The recipient must not execute any beneficiary contracts under this grant agreement prior to receipt of a letter from USDA that specifically details:

- further procedures deemed appropriate by the Agency to ensure a completed National Environmental Policy Act (NEPA) review and all appropriate consultation requirements are met, and
- 2) additional instructions for any unanticipated discoveries or conditions.

A resolution of support is required for projects on Tribal lands from the governing body of the Tribe with jurisdiction over that land, if the applicant is not the Tribe nor an entity owned or

operated by that Tribe. USDA may approve alternative documentation for resolutions when USDA deems necessary and legally sufficient.

#### IV. Producer Benefits

USDA encourages the recipient to disclose to participating producers the manner and amount for which any market premiums derived from the development of the relevant climate-smart commodity will be shared between participating parties, including producers. USDA will be monitoring producer benefits, in particular those to small and underserved producers, throughout the grant period. Recipients agree that their project(s) will implement a plan for engaging small and underserved producers as laid out in this agreement.

### V. Producer Data Protection and Disclosure

Recipients must ensure each producer has convenient access to any data collected from that producer or the producer's land and any associated modeling as part of the project. The recipient must provide each producer applying for benefits under this grant a description in writing of how their information, including but not limited to data about their farm and commodities, will be utilized, protected and shared as applicable.

### VI. Other Data and Reporting Requirements

In addition to the reporting information provided in the statement of work and General Terms and Conditions, USDA will provide a template for the Detailed Progress Report, also known as the Partnerships for Climate-Smart Commodities (PSCS) Project Reporting Workbook. Within 30 calendar days of execution of this grant, a copy of this workbook will be posted at <a href="https://www.usda.gov/climate-smart-commodities">www.usda.gov/climate-smart-commodities</a> or an alternative location provided to the recipient by the National Program Officer. USDA may provide updates to the PCSC Project Reporting Workbook or submission methods to streamline the data collection process and/or reduce the burden on the recipient throughout the grant period. Generally, these updates will be provided at least 3 months in advance of any required changes. The recipient must not transfer any data to foreign governments or foreign entities without prior approval from USDA.

USDA will provide a Technical Contact for this grant. The Technical Contact will have the responsibility of technical oversight for USDA for the project. The recipient is responsible for providing the technical assistance required to successfully implement and complete the project. The recipient must comply with any requests for information from the Technical Contact. The Technical Contact for this award is the National Program Officer assigned to this grant.

Prior to execution of this grant, the recipient must provide a shapefile depicting the project boundary for enrollment under this grant. Producer enrollment may not occur outside this boundary without modification of this grant.

Within 30 calendar days of execution of this grant, the recipient must provide to the National Program Officer a website address where enrollment information will be posted for producers for the project associated with this grant. Recipients will be responsible for the following reports:

- Submit quarterly performance reports that include a written progress report, as well as
  additional reporting on specific data elements contained in the most up-to-date version
  of the Partnerships for Climate-Smart Commodities Project Reporting Workbook.
   Additional information about each reported element is described in the Data Dictionary.
- Submit supplemental reports required to validate greenhouse gas (GHG) benefit data, including: (1) an initial project MMRV plan, (2) field-modeled GHG benefit reports, and (3) field-direct GHG measurement results, as applicable. Additional information about these reports is in included in the Data Dictionary.
- Submit copies of project outputs and deliverables (e.g., fact sheets, reports) as attachments in ezFedGrants along with quarterly performance reports.
- Report the version of COMET-Planner used to estimate GHG benefits of the project within each quarterly performance report. As COMET-Planner is updated, recipients must adopt the latest version of the tool as directed by USDA for use in performance reports.

Recipients must designate an individual as a member of the USDA Partnerships for Climate-Smart Commodities Learning Network (Partnerships Network); this representative should be identified in the Project Narrative for this grant. Each project includes a plan for up to two Partnerships Network virtual meetings and two in-person meetings a year during the project duration. Dates and other details on events will be posted at <a href="www.usda.gov/climate-smart-commodities">www.usda.gov/climate-smart-commodities</a> or an alternative location provided to the recipient by the National Program Officer.

The Partnerships Network will be co-chaired by representative from the USDA Office of the Chief Economist and the Farm Production and Conservation Mission Area. The Partnerships Network will inform synthesis reports to be assembled by USDA on a range of topics related to the implementation of Partnerships for Climate-Smart Commodities projects, including:

- Lessons-learned as projects are implemented;
- Options for providing technical assistance;
- Procedures for measurement/quantification, monitoring, reporting, and verifying GHG benefits;
- Options for tracing climate-smart commodities through the supply chain;
- Mechanisms for reducing costs of implementation;
- A forum for discussion and learning regarding approaches to climate-smart agriculture and forestry implementation (including but not limited to deployment and

measurement/quantification, monitoring, reporting, tracking, and verification of associated greenhouse gas benefits and marketing of climate-smart commodities).

- · Synthesis of outcomes; and
- Opportunities for USDA and others to inform future approaches to generating new and expanded markets for climate-smart commodities.

The Partnerships Network topics to be discussed will cover at minimum the areas described in previous FAQs and will evolve with USDA's ongoing project data analysis efforts and with input from the project recipients on the kinds of sessions that will be most helpful to them in building the diverse climate-smart markets associated with their projects. Participation may include at least one interview a year and include questions related to the following areas:

- Technical assistance approaches, methods, and successes and/or challenges
- Producer outreach approaches, methods, and successes and/or challenges
- Monitoring, measurement, reporting, and verification (MMRV) approaches, methods, and successes and/or challenges
- Marketing approaches, methods, and successes and/or challenges
- Partnership approaches, methods, and successes and/or challenges
- Data collection and storage approaches, methods, and successes and/or challenges
- Supply chain approaches, methods and successes and/or challenges, including approaches to traceability
- Supply chain benefits and demand for climate-smart commodities
- Perspectives on program design, climate-smart commodity definitions, and future approaches or opportunities
- Project successes and stories

USDA may also request producer exit reports at a later date. Additional marketing and branding-related requirements may be provided by USDA, including signage related to Partnerships for Climate-Smart Commodities.

### VII. Competition and Anti-Competitive Practices

In connection with this grant, recipients may not prohibit or otherwise limit a producer from changing the provider of other services or materials not included as part of this grant. Recipients may not condition, limit, steer, or discriminate in their provision or sale of non-project business functions or products to producers based on their participation or non-participation in or use of any services provided as part of this grant. Additionally, funds in this agreement shall not be used for purposes or activities related to mergers or acquisitions.

### VIII. Suspension and Disbarment

The provisions governing Suspension and Disbarment in subsection 1.a.8 shall also apply to fraud, embezzlement, theft, forgery, bribery, falsification, or destruction of records, making false statements, or violations of the Federal civil antitrust or unfair trade practice laws.

### IX. Special provisions for awards to for-profit entities as recipients

This section contains provisions that apply to awards to for-profit entities. These provisions are in addition to other applicable provisions of these terms and conditions, or they make exceptions from other provisions of the terms and conditions for awards to for-profit entities. For-profit entities that receive awards have two options regarding audits:

- A financial related audit of a particular award in accordance with Generally Accepted Government Auditing Standards issued by the Comptroller General of the United States, in those cases where the for-profit entity receives awards under only one USDA program; or, if awards are received under multiple USDA programs, a financial related audit of all awards in accordance with Generally Accepted Government Auditing Standards issued by the Comptroller General of the United States; or
- 2) An audit that meets the requirements contained in 2 CFR 200 subpart F.

For-profit entities that receive annual awards totaling less than the audit requirement threshold in 2 CFR 200 subpart F are exempt from USDA audit requirements for that year, but records must be available for review by appropriate officials of Federal agencies or the Government Accountability Office.

### X. Non-Disparagement

Recipients may not engage in any advertising deemed by USDA as disparaging to another agricultural commodity or competing product, or in violation of the prohibition against false and misleading advertising. Disparagement is defined as anything that depicts other commodities in a negative or unpleasant light via overt or subjective video, photography, or statements. Comparative advertising is allowable, provided the presentation of facts is truthful, objective, not misleading, and supported by a reasonable basis.
